Video Game Spaces Michael Nitsche, 2008-12-05 An exploration of how we see use and make sense of modern video game worlds The move to 3D graphics represents a dramatic artistic and technical development in the history of video games that suggests an overall transformation of games as media The experience of space has become a key element of how we understand games and how we play them In *Video Game Spaces* Michael Nitsche investigates what this shift means for video game design and analysis Navigable 3D spaces allow us to crawl jump fly or even teleport through fictional worlds that come to life in our imagination We encounter these spaces through a combination of perception and interaction Drawing on concepts from literary studies architecture and cinema Nitsche argues that game spaces can evoke narratives because the player is interpreting them in order to engage with them Consequently Nitsche approaches game spaces not as pure visual spectacles but as meaningful virtual locations His argument investigates what structures are at work in these locations proceeds to an in-depth analysis of the audiovisual presentation of gameworlds and ultimately explores how we use and comprehend their functionality Nitsche introduces five analytical layers rule-based space mediated space fictional space play space and social space and uses them in the analyses of games that range from early classics to recent titles He revisits current topics in game research including narrative rules and play from this new perspective *Video Game Spaces* provides a range of necessary arguments and tools for media scholars designers and game researchers with an interest in 3D game worlds and the new challenges they pose

Handbook of Evolutionary Machine Learning Wolfgang Banzhaf, Penousal Machado, Mengjie Zhang, 2023-11-01 This book written by leading international researchers of evolutionary approaches to machine learning explores various ways evolution can address machine learning

problems and improve current methods of machine learning Topics in this book are organized into five parts The first part introduces some fundamental concepts and overviews of evolutionary approaches to the three different classes of learning employed in machine learning The second addresses the use of evolutionary computation as a machine learning technique describing methodologic improvements for evolutionary clustering classification regression and ensemble learning The third part explores the connection between evolution and neural networks in particular the connection to deep learning generative and adversarial models as well as the exciting potential of evolution with large language models The fourth part focuses on the use of evolutionary computation for supporting machine learning methods This includes methodological developments for evolutionary data preparation model parametrization design and validation The final part covers several chapters on applications in medicine robotics science finance and other disciplines Readers find reviews of application areas and can discover large scale real world applications of evolutionary machine learning to a variety of problem domains This book will serve as an essential reference for researchers postgraduate students practitioners in industry and all those interested in evolutionary approaches to machine learning
