†Deceased.

The use of FRP as reinforcement for concrete structures has been growing rapidly in recent years. This state-of-the-art report summarizes the current state of knowledge on these materials. In addition to the material properties of the constituents, i.e., resins and fibers, design philosophies for reinforced and prestressed elements are discussed. When the available data warrant flexure, shear, and bond behavior, and serviceability of the members has been examined. Strengthening of existing structures with FRPs and field applications of these materials are also presented.

Keywords: composite materials; concrete; concrete construction; design; external reinforcement; fiber reinforced plastic (FRP); fibers; mechanical properties; polymer resins; prestressed concrete; reinforced concrete; reinforcement; research; structural analysis; structural elements; structural research; testing; test methods.

ACI Committee Reports, Guides, Standard Practices, and Commentaries are intended for guidance in designing, planning, executing, or inspecting construction and in preparing specifications. Reference to these documents shall not be made in the Project Documents. If items found in these documents are desired to be part of the Project Documents, they should be phrased in mandatory language and incorporated in the Project Documents.

Reinforcement for Concrete Structures ACI Committee 440, 1996 Perspectives in Civil Engineering Jeffrey S.
Russell, 2003-01-01 This report contains 27 papers that serve as a testament to the state of the art of civil engineering at the
outset of the 21st century as well as to commemorate the ASCE's Sesquicentennial Written by the leading practitioners
educators and researchers of civil engineering each of these peer reviewed papers explores a particular aspect of civil
engineering knowledge and practice Each paper explores the development of a particular civil engineering specialty
including milestones and future barriers constraints and opportunities The papers celebrate the history heritage and
accomplishments of the profession in all facets of practice including construction facilities special structures engineering
mechanics surveying and mapping irrigation and water quality forensics computing materials geotechnical engineering
hydraulic engineering and transportation engineering While each paper is unique collectively they provide a snapshot of the
profession while offering thoughtful predictions of likely developments in the years to come Together the papers illuminate
the mounting complexity facing civil engineering stemming from rapid growth in scientific knowledge technological
development and human populations especially in the last 50 years An overarching theme is the need for systems level
approaches and consideration from undergraduate education through advanced engineering materials processes
technologies and design methods and tools These papers speak to the need for civil engineers of all specialties to recognize
and embrace the growing interconnectedness of the global infrastructure economy society and the need to work for more
sustainable life cycle oriented solutions While embracing the past and the present the papers collected here clearly have an
eye on the future needs of ASCE and the civil engineering profession **High Performance Concretes** Paul Zia, 1991 This
state of the art report summarizes the results of an extensive search and review of available literature on the mechanical
properties of concrete with particular reference to high performance concrete for highway applications Included in the
review and discussion are the behavior of plastic concrete as well as the strength and deformation characteristics of
hardened concrete Both short term and long term effects are considered Based on the review of the available information
research needs are identified It is concluded that much research is needed to develop data on the strength and durability
properties of concrete which develops high strength particularly very early strength **Fibre Reinforced Concrete:**
