Dissecting Characteristics via Machine Learning for Stock Selection David Dümig, 2020-01-31 Academic Paper from the year 2019 in the subject Business economics Investment and Finance language English abstract We conduct a comparative analysis of methods in the machine learning repertoire including penalized linear models generalized linear models boosted regression trees random forests and neural networks that investors can deploy to forecast the cross section of stock returns Gaining more widespread use in economics machine learning algorithms have demonstrated the ability to reveal complex nonlinear patterns that are difficult or largely impossible to detect with conventional statistical methods and are often more robust to the effects of multi collinearity among predictors We provide new evidence that machine learning techniques can improve the economic value of cross sectional return forecasts The implications of machine learning for quantitative finance are becoming both increasingly apparent and controversial There is a growing discussion over whether machine learning tools can and should be applied to predict stock returns with greater precision Broadly speaking models that can be used to explain the returns of individual stocks draw on stock and firm characteristics such as the market price of financial instruments and companies accounting data These characteristics can also be used to predict expected returns out of sample

Advocacy Networks and the Responsibility to Protect Sarka Kolmasova, 2023-02-03 This book contributes to existing debates on the Responsibility to Protect R2P by demonstrating new advocacy strategies and the greater interconnectedness of various R2P proponents In 2021 the UN General Assembly adopted a new resolution on R2P which reaffirmed its commitment from the 2005 World Summit Outcome and put R2P on the annual agenda For many R2P proponents this was another manifestation of worldwide R2P relevance and of growing support among UN members to protect people from genocide war crimes ethnic cleansing and crimes against humanity Yet the existing crises in Myanmar Venezuela Belarus Syria and many others revealed the widening gap between the discourse and practice This book aims to find out what keeps the concept alive despite its indisputable pitfalls In contrast to existing studies that treat the R2P endorsement or contestation as intertwined processes of norm evolution it argues that the status of

R2P has been accomplished by the conscious politics of its advocates operating in complex global networks As such the book puts emphasis on the agency of R2P champions and examines who keeps the idea resonating and how they manage to preserve its worldwide relevance Rather than proposing a new model of advocacy the book aims to pinpoint the politics of R2P s circulation the importance of individual R2P champions and their interconnectedness through innovative forms of cooperation within complex networks This book will be of much interest to students of the R2P diplomacy human rights foreign policy and International Relations
