Mine the Gap for Mathematical Understanding, Grades 3-5 John SanGiovanni, 2016-09-16 Being an effective math educator is one part based on the quality of the tasks we give one part how we diagnose what we see and one part what we do with what we find Yet with so many students and big concepts to cover it can be hard to slow down enough to look for those moments when students responses tell us what we need to know about next best steps In this remarkable book John SanGiovanni helps us value our students misconceptions and incomplete understandings as much as their correct ones because it s the gap in their understanding today that holds the secrets to planning tomorrow s best teaching SanGiovanni lays out 180 high quality tasks aligned to the standards and big ideas of Grades 3 5 mathematics including addition and subtraction of multi digit whole numbers multiplication and division of single and multi digit whole numbers foundational fraction concepts foundational decimal concepts and operations with fractions and decimals The tasks are all downloadable so you can use or modify them for instruction and assessment Each big idea offers a starting task followed by what makes it a high quality task what you might anticipate before students work with the task 4 student examples of the completed task showcasing a distinct gap commentary on what precisely counts for mathematical understanding and the next instructional steps commentary on the misconception or incomplete understanding so you learn why the student veered off course three additional tasks aligned to the mathematics topic and ideas about what students might do with these additional tasks It s time to break our habit of rushing into re teaching for correctness and instead get curious about the space between right and wrong answers *Mine the Gap for Mathematical Understanding* is a book you will return to again and again to get better at selecting tasks that will uncover students reasoning better at discerning the quality and clarity of students understanding and better at planning teaching based on the gaps you see

Object Lessons Caren Holtzman, Lynn Susholtz, 2024-11-15 When Caren Holtzman and Lynn Susholtz look around a classroom they see a veritable goldmine of mathematical investigations involving number measurement size shape symmetry ratio and proportion They also think of the ways great artists have employed these concepts in their depictions of objects and space for example Picasso s use of geometric shapes in his Cubist still lifes or contemporary artist Tara Donovan s room sized

sculptures of everyday items In their new book Object Lessons Caren a math educator and Lynn an artist and art educator use a highly visual approach to show students and teachers the art in math and the math in art Integrating visual arts into math experiences makes the lessons accessible engaging and meaningful for a wide range of students In each chapter the authors use everyday objects to create rigorous hands on activities that address key mathematics standards and concepts Each lesson provides an introduction to the featured object that explains how it connects to key mathematical concepts a discussion of the artists art styles and techniques featured activities organized by grade level and math content area the basic materials required to prepare and teach each lesson a clear picture of what the lesson will look like in a classroom and a list of resources The book and its accompanying CD feature a wonderful gallery of images including art photos and student work and a collection of links to art education organizations museums and Web sites that focus on the work of forty major artists GMAT All the Quant + DI: Effective Strategies & Practice for GMAT Focus + Atlas online Manhattan
