Art Themes Marjorie Cohee Manifold, 2017-11-20
Flexible in approach and full of colorful examples, this textbook provides a basic introduction to what art is and can be in the lives of people who do not necessarily think of themselves as artists. You will be taught about a variety of art themes, genres, materials and processes that appeal to novice art makers. The lessons are organized by themes of general subject matter or media. Options are available for work in mixed media, crafts, photography and digital media as well as in traditional drawing or painting media. After picking a theme of particular interest to you, look next at the four strands of lessons presented in that thematic unit. Moving from left to right, select one lesson from each consecutive strand and complete that lesson. Because each lesson builds upon previously presented knowledge and developed skill as you progress through four lessons, one from each strand, you should grow in your understanding of art concepts, meanings and processes while also improving your art making skills. Completing this course will help you develop a new appreciation for the power and possibilities of art learning by understanding better the art others create as well as making it yourself.

The Animals

Among Us John Bradshaw, 2017-10-31 A leading anthrozoologist and the bestselling author of *Dog Sense* and *Cat Sense* explains why we are so drawn to pets. Historically we relied on our pets to herd livestock, guard homes and catch pests. But most of us don't need animals to do these things anymore. Pets have never been less necessary. And yet pet ownership has never been more common than it is today: half of American households contain a cat, a dog or both. Why are pets still around? In *The Animals Among Us*, John Bradshaw, one of the world's leading authorities on the relationship between humans and animals, argues that pet ownership is actually an intrinsic part of human nature. He explains how our empathy with animals evolved into a desire for pets, why we still welcome them into our families and why we mourn them so deeply when they die. Drawing on the latest research in biology and psychology as well as fields as diverse as robotics and musicology, *The Animals Among Us* is a surprising and affectionate history of humanity's best friends.

Political Animals Rick Shenkman, 2016-01-05 Why when it comes to politics do we often seem so gullible and uninformed? In *Political Animals*, the bestselling historian and journalist Rick Shenkman reveals the hidden biases at work in all of us when we enter the voting booth. Drawing on cutting edge research in neuroscience, evolutionary psychology and behavioral psychology, he explains that evolution has left us with a brain wired for the Stone Age. While these ancient instincts often work to our advantage in our personal lives, in politics they usually don't. Modern cues set off ancient instinctive responses that prompt us to behave in ways contrary to the good governance of our nation. Shenkman illuminates not only the curious habits of the American voter today, but also the ways in which voter biases have shaped American political history, from the shark attacks that got Woodrow Wilson elected to the people who still defend Richard Nixon against the Watergate charges. In so doing, Shenkman probes the depths of the human mind to reveal what we must do to fix our floundering democracy.

Math for the Very Young Lydia Polonsky, Dorothy Freedman, Susan Leshner, Kate Morrison, 1995-04-03 Four experienced teachers who have written math curricular materials for the University of Chicago School Mathematics Project present a comprehensive collection of innovative and fun activities, easy enough for even the most math phobic parents. Covers all math concepts appropriate for children ages 3-7, including measurement, counting, telling time and temperature, comparisons, arrays, shapes and patterns. Organized by type of activity, such as cooking, taking a trip, playing games and making crafts.

We Care Bertie Kingore, 2002 Hundreds of proven, hands-on activities carefully outlined and using inexpensive materials emphasize learning by doing, encourage creativity and afford opportunities to develop responsibility. Organized into 19 thematic units, from *Marvelous Me* to *Summertime* and *the Sun* and correlated to the school year calendar, the activities cover key curriculum areas such as language arts, math and science. They also involve art, music, cooking, movement, block play and role plays. Jargon free and clearly written, the book is also a great resource for parents. Grades preK-K. 302 pages. Good Year Books. A Sense of Place Daniel A. Kriesberg, 1999-03-15 Celebrating nearby nature and the marvels of our own backyards, this book helps you introduce children to the world around them. With quality children's literature and simple

activities you can cultivate a child's sense of wonder and joy and teach him or her the importance of living in harmony with nature. These projects span the curriculum and are presented in reproducible format so they're easy to use. Highlighting the five senses sight, sound, smell, taste, touch, they build connections between students and the land and create in young learners a sense of place, a true necessity for living in the world today. Grades K-6

[Beasts Before Us](#) Elsa Panciroli, 2021-06-10 For most of us, the story of mammal evolution starts after the asteroid impact that killed the dinosaurs, but over the last 20 years, scientists have uncovered new fossils and used new technologies that have upended this story. In *Beasts Before Us*, palaeontologist Elsa Panciroli charts the emergence of the mammal lineage Synapsida beginning at their murky split from the reptiles in the Carboniferous period over three hundred million years ago. They made the world theirs long before the rise of dinosaurs. Travelling forward into the Permian and then Triassic periods, we learn how our ancient mammal ancestors evolved from large hairy beasts with accelerating metabolisms to exploit miniaturisation, which was key to unlocking the traits that define mammals as we now know them. Elsa crisscrosses the globe to explore the sites where discoveries are being made and meet the people who make them. In Scotland, she traverses the desert dunes of prehistoric Moray where quarry workers unearthed the footprints of Permian creatures from before the time of dinosaurs. In South Africa, she introduces us to animals once called mammal-like reptiles that gave scientists the first hints that our furry kin evolved from a lineage of egg-laying burrowers. In China, new complete fossilised skeletons reveal mammals that were gliders, shovel-pawed Jurassic moles and flat-tailed swimmers. This book radically reframes the narrative of our mammalian ancestors and provides a counterpoint to the stereotypes of mighty dinosaur overlords and cowering little mammals. It turns out the earliest mammals weren't just precursors; they were pioneers.
