Objective Measures in Cochlear Implants Michelle Hughes, 2012-07-13 Oto-, Rhino-, Laryngology Martinus Willem Woerdeman, 1959 Product Standards, Exports and Employment Rajat Acharyya, 2006-03-30 Through the process of globalization the trade dependence and int dependence of the developing countries have increased phenomenally than ever before The characteristic of this late twentieth century globalization process has been the new technological revolution that has led to a high rate of world exports of electronics and other high technology products This has marginalized most of the developing countries exporting largely the low quality and low value addition manufacturing and primary products barring a few exceptions like China India and Mexico The fruits of globalization have therefore been unevenly distributed so far across the developed and the developing countries Moreover whatever little growth in exports of medium technology products has been achieved by a few of them is largely driven by outsourcing of low value addition and low stage of activities by the foreign multinationals Outsourcing of software services rather than development of software packages in India and assembly line for automobiles in Mexico are the two glaring examples These activities may have boosted the total exports of these countries but they have failed to generate any feedback effect on the rest of the economy in terms of skill formation increase in overall productivity level and product diversification
