Advanced Techniques in Liposuction and Fat Transfer Nikolay Serdev, 2011-09-12

Liposuction is the first cosmetic procedure to change beautification surgery from open extensive excision surgery into a more atraumatic closed one. It gave rise to the modern understanding of minimally scarring and minimally invasive surgery and changed the understanding and preferences of both patients and doctors. It also became the most common procedure in cosmetic surgery world wide practiced by an increased number of physicians from various specialties. The techniques of fat grafting closely bound with liposuction have found widespread application and fat stem cells seem to be changing the future of many areas in medicine. Turning the pages the reader will find a lot of information about advances, tips and tricks as well as important milestones in the development of the different methods available such as classic power ultrasound laser and radio frequency assisted liposuction etc. Most useful anesthesia techniques are described and discussed and guidelines have been established for medical indications. Special attention is paid to good patient selection, complications and risks.

Quantitative Coronary Arteriography Johan H. C. Reiber, P.W. Serruys, 2012-12-06. In June 1989 a third conference concentrating on the progress in quantitative coronary angiography and related techniques was held in Rotterdam again very successful as the two preceding events in 1985 and 1987. Technical as well as clinical aspects of digital and digitized coronarography, morphometry, parametric imaging and functional quantification of the human coronary circulation were presented and discussed by prominent exponents of those groups who have been active in this particular field for many years. This book contains the chapters representing the lectures held by leading experts during the symposium that update the knowledge currently available including most recent aspects in angiography and intravascular ultrasound imaging. It also includes a historical review on the development of angiographic techniques from the very early days on to our times given by one of the pioneers in heart catheterization and angiography Dr Kurt Amplatz. Those who had the chance to listen to his talk will surely remember his impressive humorous lecture as one of the highlights of this meeting. Locative Alternation Seizi Iwata, 2008. The aim of the present volume is two fold to give a coherent account of the locative alternation in English and to develop a constructional theory that overcomes a number of problems in earlier constructional accounts. The lexical constructional account proposed here is characterized by two main features. On the one hand it emphasizes the need for a detailed examination of verb meanings. On the other it introduces lower level constructions such as verb class specific constructions and verb specific constructions and makes full use of these lower level constructions in accounting for alternation phenomena. Rather than being a completely new version of construction grammar the proposed lexical constructional account is an automatic consequence of the basic tenet of constructional approaches as being usage based. **Inyección Electrónica en motores a gasolina** Equipo
