The contributors discuss the impact of the five factor model on personality assessment, the issue of deception in personality assessment and various critical issues in the measurement of mood states. Other articles focus on the integration of the MMPI 2 and Rorschach and the process that clinicians should follow when applying scientific knowledge to clinical practice. Part III is primarily devoted to overviews of several statistical methods that are employed infrequently in personality assessment research but have great potential in contributing to the understanding of the complex data sets often encountered in the measurement and study of personality. These articles serve as both an introduction and a brief tutorial for personality researchers who are unfamiliar with the subject matter. They are valuable references that will form the basis for evaluating the appropriate use of these methods in published research in their areas of interest.

Teaching and Learning Personality Assessment Leonard Handler, Mark J. Hilsenroth, Mark Hilsenroth, 2013-06-17 How do we move from an understanding of the administration scoring and interpretation of responses on various personality assessment instruments to the ability to put our understanding into words and communicate it effectively to referral agents and to patients themselves? And how do we transmit that ability to students? *Teaching and Learning Personality Assessment* strives to fill a gap in the literature and in many training programs. The editors have assembled a group of renowned clinicians noted not only for their own acumen in personality assessment but also for their teaching talent who present in detail time tested techniques for teaching assessment. Readers have the opportunity to sit beside these seasoned mentors and learn their special skills. Numerous examples illustrate the key concepts. For every
