Baeten, PhD, 2016-09-20 Does the use of the Internet in any way contribute to a student's learning process and if yes precisely what added value does this represent This question and more specifically the attempt to answer it is what lies at the heart of this dissertation which considers the issue from a number of perspectives based on experiences opinions and academic theories This is done through the analysis of a new and innovative educational concept Virtual Action Learning Virtual Action

Learning VAL is an educational concept that was designed to connect with the personal learning environments of people who live in a world where technology and social media play a dominant role. In other words, a world in which information is processed in an interactive and visual manner within the context of ever-changing situations and processes that demand ever higher levels of individual responsibility. The application of VAL concerns a way of learning that is different from what is common. VAL is based on social constructivist learning theory in combination with an intensive use of ICT in the student's learning process. This takes place in the Virtual Learning Community (VLC), an electronic learning environment developed to support the learning process. In addition to the educational characteristics of the VAL concept, a managerial perspective can be distinguished that involves the way in which schools and universities organise their processes in order to facilitate learning. This process approach, born in the nineteen nineties, is grounded in a number of business theories. The VAL concept distinguishes three primary processes: the learning process for which the student carries responsibility and the processes related to teaching and assessment for which the instructor is held responsible. With the help of design principles that are firmly based on theory, we first describe the way in which the learning process evolves. The ensuing assessment process is closely linked with the educational process but is first and foremost geared towards the learning process of individual students. By connecting the above-mentioned process activities via a Feedback and Reflection Cycle, it becomes possible to establish a strong connection between a course's contents and its related competences. To achieve this, we need to ensure that throughout the course, participants are continuously engaged in a Meaningful Dialogue interaction and the mutual exchange of constructive feedback, not only among students themselves but also among students and their teachers. This is partly done in the VLC and partly during meetings held at school, a process for which new virtual educational forms have been designed and which focuses on the power of feedback provided and received by students on their specific learning products in the VLC. Within the VAL concept, the Meaningful Dialogue is considered to be the measure of good quality education that is supported by ICT.

Beer and Circus Murray Sperber, 2001-09

In this fascinating book, Sperber uses original research culled from students, faculty, and administrators around the country to argue that what universities offer instead of a meaningful undergraduate education is a meager and dangerous substitute: the party scene surrounding college sports that Sperber calls *beer and circus*, and which serves to keep the students happy while tuition dollars keep rolling in. He explodes cherished myths about college sports, showing for instance that contrary to popular belief, the money coming in to universities from sports programs never makes it to academic departments. Sperber's profound re-evaluation of college sports and higher education comes straight out of today's headlines and opens our eyes to a generation of students deprived of the education they deserve. Murray Sperber has been acknowledged for years as the country's leading authority on college sports and their role in American culture. In the wake of Indiana University's decision to fire head basketball coach Bobby Knight last year, Sperber was in constant demand across the country on television, radio, and print media to comment on the

pressure vessel design formula and calculators resources engineers edge - Sep 27 2022

web thin walled vessels are typically either spherical or cylindrical other geometries are possible but their complexity precludes their inclusion in this webpage spherical cylinder stress and deflection filled to depth d with liquid of density ρ force unit volume tangential edge support equation and calculator

chapter 1 thin walled circular cylinders under internal and - May 04 2023

web thin walled circular cylinders these stresses which entail a triaxial stress state can be readily obtained by simply setting equilibrium conditions i.e. without making use of compatibility conditions

thick cylinders springerlink - Aug 27 2022

web in chapter 2 we examined the stresses in thin walled cylinders subjected to internal pressure the assumption of thin walls allowed us to develop a simple analysis that ignored the variation of radial stress when the wall thickness becomes appreciable in proportion

thin walled cylinders and spheres cylinders and spheres - Jul 26 2022

web oct 12 2011 if the cylinder walls are thin and the ratio of the thickness to the internal diameter is less than about 0.1 then it can be assumed that the hoop and longitudinal stresses are constant across the thickness it may also be assumed that the radial stress is small and can be neglected

danotes cylinders thin cylinders university of cambridge - Dec 31 2022

web a fluid container sealed by a piston is open to the atmosphere in this case an external axial force F_a is mandatory for equilibrium of the overall piston and cylinder assembly a bicycle pump is a common example if A_i is the internal circular area then a free body of either piston or cylinder end C must have $F_a = p_i A_i$ and there is no need for axial wall stresses to

pressure vessel thin wall hoop and longitudinal stresses engineers edge - Mar 02 2023

web the classic equation for hoop stress created by an internal pressure on a thin wall cylindrical pressure vessel is $\sigma_\theta = \frac{p d}{2 t}$ for the hoop stress thin wall pressure vessel hoop stress calculator where p is the internal pressure t is the wall thickness r is the inside radius of the cylinder

research on the integral forming process of thin walled and - Mar 22 2022

web oct 9 2023 the development of the manufacturing process of thin walled and thick mounted cylinders which can largely improve the storage efficiency of hydrogen has also attracted considerable attention

stress in thin walled cylinders or tubes the engineering toolbox - Oct 09 2023
