

USPSTF Guidelines (Final)

“There are numerous screening tests to detect early-stage colorectal cancer, including:

1

stool-based tests
(gFOBT, FIT, and FIT-DNA)

2

direct visualization tests
(flexible sigmoidoscopy, alone or combined with FIT; colonoscopy; and CT colonography)

3

serology tests
(SEPT9 DNA test)

USPSTF found no head-to-head studies demonstrating that any of these screening strategies are more effective than others, although they have varying levels of evidence supporting their effectiveness, as well as different strengths and limitations.”
