

Apply suitable colours available in the market on the pinion teeth.

Fit the drilled bolt-crown unit cover and their spacers and gaskets on the housing and provisionally tighten the screws.

On the crown holder drilled bolt, fit a "Universal" extractor that with appropriate central spacers slightly presses the crown towards the brake disc side. Turn the pinion in the riding direction, with the crown braked so that the rotation is carried out under load, and leaves a contact mark on the pinion surface.

If the contact is regular, the mark on the pinion teeth will be like this (the pinion is seen from the crankshaft side)
