Vector Addition Worksheet

Directions: Solve the problems below by using the component method of vector addition to find the resultant. Make sure that the resultant has both magnitude and direction because it is a vector quantity. Show all work by setting up the chart and showing the equations for each problem and circle your final answer. Make sure to include correct units.

1. Solve for the resultant displacement of the two vectors:

A = 2.3 km @ 45 degrees

$cosine\theta = \frac{adjacent}{hypotenuse}$ $sine\theta = \frac{opposite}{hypotenuse}$

$adj = hyp cos\theta$ $opp = hyp sin\theta$

$= 2.3cos45$ $= 2.3sin45$

$= 1.63\ km$ $= 1.63\ km$
$R = \sqrt{1.63^2 + 1.63^2}$

$= 2.3\ km$

$\tan\theta = \frac{1.63}{1.63} = 1$

$\theta = \tan^{-1}(1) = 45°$

Final Answer: 2.3 km at 45 degrees

B = 4.8 km @ 90 degrees

$cosine\theta = \frac{adjacent}{hypotenuse}$ $sine\theta = \frac{opposite}{hypotenuse}$

$adj = hyp cos\theta$ $opp = hyp sin\theta$

$= 4.8cos90$ $= 4.8sin90$

$= 0\ km$ $= 4.8\ km$

$R = \sqrt{0^2 + 4.8^2}$

$= 4.8\ km$

$\tan\theta = \frac{4.8}{0} = 0$

$\theta = \tan^{-1}(0) = 0°$

Final Answer: 4.8 km at 0 degree

The William Lowell Putnam Mathematical Competition 1985–2000: Problems, Solutions, and Commentary Kiran S. Kedlaya,Bjorn Poonen,Ravi Vakil,2020-01-16 This third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes The authors highlight connections to other problems to the curriculum and to more advanced topics The best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates The solutions have been compiled from the American Mathematical Monthly Mathematics Magazine and past competitors Multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand In addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition The book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics   *The Formative 5 in Action, Grades K-12* Francis (Skip) Fennell,Beth McCord Kobett,Jonathan A. Combinatorial Optimization Martin Grötschel,Laszlo Lovasz,Alexander Schrijver,2012-12-06 Historically there is a close connection between geometry and optImization This is illustrated by methods like the gradient method and the simplex method which are associated with clear geometric pictures In combinatorial optimization however many of the strongest and most frequently used algorithms are based on the discrete structure of the problems the greedy algorithm shortest path and alternating path methods branch and bound etc In the last several years geometric methods in particular polyhedral combinatorics have played a more and more profound role in combinatorial optimization as well Our book discusses two recent geometric algorithms that have turned out to have particularly interesting consequences in combinatorial optimization at least from a theoretical point of view These algorithms are able to utilize the rich body of results in polyhedral combinatorics The first of these algorithms is the ellipsoid method developed for nonlinear programming by N Z Shor D B Yudin and A S NemirovskiI It was a great surprise when L G Khachiyan showed that this method can be adapted to solve linear programs in polynomial time thus solving an important open theoretical problem While the ellipsoid method has not proved to be competitive with the simplex method in practice it does have some features which make it particularly suited for the purposes of combinatorial optimization The second algorithm we discuss finds its roots in the classical geometry of numbers developed by Minkowski This method has had traditionally deep applications in number theory in particular in diophantine approximation **Basic Fundamentals of Fluid Mechanics** Mr. Rohit Manglik,2023-07-23 Introduces fluid properties pressure measurement Bernoulli s equation and laminar vs turbulent flow principles essential in mechanical and process engineering *Hungarian Problem Book III* György Hajós,Andy Liu,G.
