Abstract The purpose of this study was to determine whether the use of a computerized decision support system (DSS) would improve the accuracy of diagnosis of simulated cases of acute myocardial infarction (AMI). Twenty-four medical students were randomly assigned to two groups. One group used a DSS to assist them in making a diagnosis of AMI, while the other group did not. The results showed that the DSS group had a significantly higher accuracy rate than the control group. This suggests that the use of a DSS can improve the accuracy of diagnosis of AMI.

There is a growing body of research on the effects of the environment on human health. This research has shown that the environment can have a significant impact on the health of individuals and communities. For example, exposure to air pollution can lead to respiratory problems, and exposure to water pollution can lead to gastrointestinal problems. In addition, the environment can also affect mental health, with studies showing that exposure to natural environments can reduce stress and improve mood. Therefore, it is important to consider the environment when developing public health interventions.

the 1990s, the number of people who have been convicted of sexual offenses has increased. In 1990, there were 1,000 sexual offenses reported in the United States. By 2000, the number had increased to 1,500. This increase is due to a number of factors, including a decrease in the number of people who are arrested for sexual offenses, a decrease in the number of people who are convicted of sexual offenses, and a decrease in the number of people who are sentenced to prison for sexual offenses.
