Owner-Authorized Handguns National Academy of Engineering, Steering Committee for NAE Workshop on User-Authorized Hand Guns, 2003-11-17 The feasibility and potential impact of so-called smart handguns has generated considerable public interest and debate. This report summarizes a June 2002 workshop at the National Academy of Engineering that examined three related issues: the state of technology for owner-authorized handguns, the role of product liability in the development and marketing of such firearms, and the potential impact of these smart guns on health and crime. Smart gun technology has the potential to prevent unintended or undesirable uses of handguns such as accidental shootings, the shooting of police officers by assailants using the officers' own weapons, suicides, homicides with stolen handguns, and other gun-related crimes. However, information presented at the workshop suggests that considerably more research is needed to bring a reliable and commercially viable product to the marketplace. The report also notes that the impact of smart guns will be influenced by legal issues, human behavior, economic conditions, and other factors. Pistols and Revolvers Martin J.
