Introduction to Chemistry and The Environment Baldwin King, 2002-03-06 Introduction to Chemistry and the Environment is written primarily to satisfy the need for a suitable textbook for a one semester course in chemistry and the environment for non science majors It is also suitable for persons who have no knowledge of chemistry but would like to be informed about the science behind many of the environmental issues facing the general public The pedagogical approach is first to provide the basics of chemistry in a conceptual non mathematical way using material from the environment where possible Then these principles are used to discuss many of the major issues in air and water pollution The text consists of ten brief chapters The first five chapters discuss chemical principles in a succinct but scientifically sound manner The individual instructor is encouraged to elaborate on these topics as he or she sees fit The next two chapters discuss the properties of gases especially the components of air and then issues in air pollution The next two chapters focus on the properties of water and aqueous solutions followed by issues in water pollution The final brief chapter is an attempt to put everything in perspective by discussing human health and the environment Included at the end of each chapter are some suggested readings for those who would like a more detailed discussion of the topics covered A set of discussion type questions ends each chapter Writing science for nonscientists is a difficult task However Baldwin King has used his many years as a chemical educator to produce a text which is clear and eminently readable by non chemists     **Bioelectrochemistry:**

**General Introduction** D. Walz, S. Roy Caplan, Israel R. Miller, Giulio Milazzo, 2012-12-06 Volume 1 of this Series is intended to give the reader a fundamental understanding of the key areas deemed essential to the study of bioelectrochemistry A thorough grasp of the theory and methodology of these basic topics is vital to cope successfully with the complex phenomena that currently face investigators in most bioelectrochemical laboratories Chapter 1 outlines the nonequilibrium thermodynamics and kinetics of the processes involved stressing the connection between the two approaches Particular emphasis is placed on the enzymes catalyzing cytosolic reactions and membrane transport The techniques discussed are sufficient for the study of systems in the steady state but systems that are evolving towards the steady state or show some other time dependent behavior require in addition the techniques of mathematical modelling These are dealt with in some detail in Chapter 2 where network representation of the system is treated at length as the method of choice in carrying out appropriate simulations In Chapter 3 attention is directed to the twin problems of water structure and ionic hydration

**Interfacial Phenomena and Colloid Stability** Tharwat F. Tadros, 2015-07-01 The main objective of this volume is to demonstrate the importance of the fundamental aspects of interfacial phenomena in various industrial applications The text provides the reader with the knowledge that is essential for the composition of the complex multi phase systems used in the above mentioned areas of application It should enable the physical and formulation chemist as well as the chemical engineer in designing the formulation on the basis of a rational approach It will also enable the formulation scientist to better understanding the factors responsible for producing a stable product with optimum application conditions The book should also be very useful for teaching the subject of formulation at academic institutions
