Gray, 2012-12-06 but when we state that $A = B$ as well having to know what we mean by A and B we also have to know what we mean by equals This section explores the role of observers how different types of observer see different things as being equal and how we can produce algorithms to decide on such equalities It also explores how we go about writing specifications to which we may compare our SCCS designs The final section is the one which the students like best Once enough of SCCS is grasped to decide upon the component parts of a design the turning the handle steps of composition and checking that the design meets its specification are both error prone and tedious This section introduces the concurrency work bench which shoulders most of the burden How you use the book is up to you I'm not even going to suggest pathways Individual readers know what knowledge they seek and course leaders know which concepts they are trying to impart and in what order
