Task Description:

Teacher Directions

Introduction

These performance tasks are designed to assess your level of mastery of some of the Common Core Standards in geometry. Today you will demonstrate your ability to use coordinates to prove simple geometric theorems algebraically and to use the properties of geometric shapes to describe objects. It is crucial that you attempt to complete the assessment to the best of your ability. You should be able to complete the assessment in 30-60 minutes.

As a performance assessment, HOW you arrive at an answer is as important, or even more important, than WHAT the numerical result is. You MUST show and explain your work. You will be assessed on the appropriateness and completeness of your solution methods and your ability to communicate them. Describe to the best of your ability what you are doing and why you are doing it. Show all the steps in your calculations.

The assessment is composed of multiple parts. Attempt all parts; however, if you cannot do one part, move on to other portions of the assessment. You may incorporate answers from one part of the assessment into other parts. Since you are being assessed on your process, you will still receive credit if you bring an incorrect value into a problem but use it properly (as long as it does not trivialize the problem.)

Some of your answers may be integers. Some may be simple rational numbers. Some answers may be irrational numbers obtained from complicated algebraic expressions. You may leave answers in exact form involving π or radicals; however, if you choose to give a decimal approximation, it should be accurate to at least 2 decimal places.

You will be asked to justify your answers or provide proofs. Write out the formulas or equations you are using. Identify and define your variables. Proofs may be in paragraph or two-column form but need to include all relevant lines in logical order.
