

The cows and the lions

Five cows lived in a little forest. They ate fresh grass in a large green meadow. They were kind friends. They decided to do everything together, so the lions couldn't attack them for food.

One day, the five cows fought and each one started to eat grass in a different place. The lions decided to seize the opportunity and killed them one by one.

This book was written not only for children but for anyone who likes to sit down on the couch at home or the bed and read a book that will take you in places you dream about. Or take children into the life of their favorite animal friends. **Spots for MATH - Stepping Up - Teacher's Edition Booklet: Grade 2** Spots for M.A.T.H., 2014-09

This initial edition finds forty-eight Oregon writers from twenty-eight different Oregon cities submitting their original offerings spanning a wide variety of genres. **The Math of Money** Morton D. Davis, 2013-04-17 This book reflects one mathematician's view of certain areas of economics and finance. It is not a how-to book; it is not exhaustive or rigorous and it comes with no guarantee of instant wealth. It tries to maximize the use of the reader's imagination and minimize rote calculation. Although some mathematical background is assumed, ordinary high school algebra will usually suffice. Whenever possible, a verbal rather than a mathematical explanation is given, but where formulas serve a useful purpose, they are introduced without derivation or apology. We are primarily concerned with concepts rather than applications, so many topics of practical importance are omitted or papered over; we do not worry about taxes, commissions, and fees, and we assume an ideal world in which assets can always be bought at the same price for which they can be sold, and where loans have the same interest rate whether you make them or take them. On the other hand, we sniff out paradoxes and anomalies that challenge our intuition. At the beginning of each chapter, we generally pose a few problems that are discussed later in the text. The reader is invited to use his common sense to find solutions to these problems. Those who accept the challenge may find their intuition is at odds with the solution more often than they expect. We hope the solutions surprise the readers and whet their appetites for further exploring. Does this mean that the book is of no practical interest? Not at all. **Math and Stories, Grades K-3** Marian R. Bartch, 1996 Discover the math lessons students can learn from activities based on 56 carefully selected children's books. Each book offers 28 fully described activity units supported by three or four reproducible handouts. Units specify correlations to standards set by the National Council of Teachers of Mathematics. In activities based on reading *Jumanji*, for example, students distinguish between probable and improbable events, do mapping on a coordinate grid, and write about what would happen if their own favorite game suddenly became real. Deanna Zandt,2010-06-14 Shows how both activists and the casually progressive can leverage the power of social networks for social change Helps readers maintain credibility establish new connections deal with common fears and have a good time Authoritative but aggressively non technical like talking to a real person with a great sense of humor who really knows her stuff Social networks can be so much more than a way to find your high school friends or learn what your favorite celebrity had for breakfast They can be powerful tools for changing the world With Share This both regular folks of a progressive bent and committed activists can learn how to go beyond swapping movie reviews and vacation photos not that there s anything wrong with that At the moment the same kinds of people who dominate the dialog off line are dominating it online and things will never change if that doesn t change Progressives need to get on social networks and share their stories join conversations connect with others and not just others exactly like themselves It s vital to reach out across all those ethnic gender preference class age lines that exist even within the progressive camp As Deanna Zandt puts it creating a just society is sort of like the evolution of the species if you have a bunch of the same DNA mixing together the species mutates poorly and eventually dies off But there are definitely dos and don ts Zandt delves into exactly what people are and are not looking for in online exchanges How to be a good guest What to share Why authenticity is more important than just about anything including traditional notions of expertise or authority She addresses some common fears like worrying about giving too much about yourself away blurring

the lines between your professional and personal life or getting buried under a steaming heap of information overload And she offers detailed nuts and bolts how to get started advice for both individuals and organizations The Internet is upending hierarchies and freeing the flow of information in a way that makes the invention of the printing press seem like an historical footnote Share This shows how to take advantage of this unprecedented opportunity to make marginalized voices heard and support real fundamental change and incidentally have some fun doing it
