Simplicity Ellis Instruction Manual:

Instrumental Teaching in Nineteenth-Century Britain David Golby, 2016-06-17 First published in 2004 this book demonstrates that while Britain produced many fewer instrumental virtuosi than its foreign neighbours there developed a more serious and widespread interest in the cultivation of music throughout the nineteenth century Taking a predominantly historical approach the book moves from a discussion of general developments and issues to a detailed examination of violin pedagogy method and content which indicates society's influence on cultural trends and informs the discussion of other instruments and institutional training that follows In the first study of its kind it examines in depth the inextricable links between trends in society education and levels of achievement It also extends beyond profession and art music to amateur and popular spheres A useful chronology of developments in nineteenth century British music education is also included This book will be of interest to those studying the history of instrumental teaching and Victorian music

Communicating Process Architectures 2004 Ian East, J. Martin, P.H. Welch, 2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline
