

Unit (3) Electricity and Magnetism

Chapter (11): Static Electricity

11.2: Electric Charge:

- Like Charges repel.
- Unlike Charges attract.
- The force decreases as distance between charges increases.

Everything is made of tiny particles called atoms. These have electric charge inside them. A simple model of the atom is shown on the right. There is a central nucleus made of Protons and Neutrons. And orbiting the nucleus there are much lighter particles called Electrons:

- Electrons have a negative charge (-).
- Protons have an equal positive charge (+).
- Neutrons carry no charge and are said to be "neutral".

- A positively charged object is an object that has lost electrons.
- A negatively charged object is an object that has gained extra electrons.

Note: only electrons (negative charges) are able to move because protons are held in place at the nucleus.

11.3: Conductors and Insulators:

Conductors are materials that let electrons pass through them. **Metals** are the best electrical conductors. This is because some of the electrons are loosely held to their atoms and are called "free electrons".

Insulators are materials that hardly conduct at all. Their electrons are held tightly to atoms and are not free to move - although they can be transferred by rubbing. (eg: wood, plastic and air)

11.4: Methods of Charging a Body:

11.4.1 Charging by rubbing (friction charging):

Harper, 2024-06-27 Provides detailed solutions to all 47 problems in the seminal textbook Quantum Mechanics Volume II With its counter intuitive premises and its radical variations from classical mechanics or electrodynamics quantum mechanics is among the most important and challenging components of a modern physics education Students tackling quantum mechanics curricula generally practice by working through increasingly difficult problem sets that demand both a theoretical grounding and a solid understanding of mathematical technique Solution Manual to Accompany Volume II of Quantum Mechanics by Cohen Tannoudji Diu and Lalo is designed to help you grasp the fundamentals of quantum mechanics by doing This essential set of solutions provides explicit explanations of every step focusing on the physical theory and formal mathematics needed to solve problems with varying degrees of difficulty Contains in depth explanations of problems concerning quantum mechanics postulates mathematical tools approximation methods and more Covers topics including perturbation theory addition of angular momenta electron spin systems of identical particles time dependent problems and quantum scattering theory Guides readers on transferring the solution approaches to comparable problems in quantum mechanics Includes numerous figures that demonstrate key steps and clarify key concepts Solution Manual to Accompany Volume II of Quantum Mechanics by Cohen Tannoudji Diu and Lalo is a must have for students in physics chemistry or the materials sciences wanting to master these challenging problems as well as for instructors looking for pedagogical approaches to the subject

Supplementary Material and Solutions Manual for Mathematical Modeling in the Environment Charles R. Hadlock, 2020-05-05 This manual is meant to provide supplementary material and solutions to the exercises used in Charles Hadlock s textbook Mathematical Modeling in the Environment The manual is invaluable to users of the textbook as it contains complete solutions and often further discussion of essentially every exercise the author presents in his book This includes both the mathematical computational exercises as well as the research questions and investigations Since the exercises in the textbook are very rich in content rather than simple mechanical problems and cover a wide range most readers will not have the time to work out every one on their own Readers can thus still benefit greatly from perusing solutions to problems they have at least thought about briefly Students using this manual still need to work out solutions to research questions using their own sources and adapting them to their own geographic locations or to numerical problems using their own computational schemes so this manual will be a useful guide to students in many course contexts Enrichment material is included on the topics of some of the exercises Advice for teachers who lack previous environmental experience but who

want to teach this material is also provided and makes it practical for such persons to offer a course based on these volumes
