NIST Technical Note ,1991 Study of Reutilization of Wastewater Recycled Through Groundwater

Doyle F. Boen, James H. Bunts, Robert J. Currie (Author of Study of reutilization of wastewater recycled through groundwater), 1972 A project to demonstrate the feasibility and safety of recycling water under operating conditions was performed in the Hemet San Jacinto Valley of the State of California Since the Valley is a closed basin and is dependent in part upon imported water it was felt that recycling of the water would ultimately lead to a reduction in the salt input and resultant degradation of the existing underground reservoir The project added considerable knowledge and experience to the technology of intermittent wastewater percolation and associated monitoring techniques A novel feature of the project was the employment of highly sensitive temperature probes to trace the lateral migration of the recharged water much of which appears to be escaping as shallow underflow to the San Jacinto River and hence not reaching the deep groundwater table

Manipulating Quantum Structures Using Laser Pulses Bruce W. Shore, 2011-09-29 The use of laser pulses to alter the internal quantum structure of individual atoms and molecules has applications in quantum information processing the coherent control of chemical reactions and in quantum state engineering This book presents the underlying theory of such quantum state manipulation for researchers and graduate students The book provides the equations and approaches for their solution which can be applied to complicated multilevel quantum systems It also gives the background theory for application to isolated atoms or trapped ions simple molecules and atoms embedded in solids Particular attention is given to the ways in which quantum changes can be displayed graphically to help readers understand how quantum changes can be controlled

Vibronic Interactions and the Jahn-Teller Effect Mihail Atanasov, Claude Daul, Philip L.W.

Tregenna-Piggott, 2011-11-23 The concepts of the Jahn Teller effect and vibronic coupling are being applied to more and more systems in both chemistry and physics Aspects of structural chemistry such as the distortion of the nuclear framework to a lower symmetry conformation have received an increasing attention as well as the dynamics on the coupled potential energy surfaces The Jahn Teller intersections are now recognized as prototype cases of conical intersections where the nuclear motion is known to be inherently nonadiabatic in nature and interchanges freely between the different potential energy surfaces In the condensed phase especially the significance of the Jahn Teller effect has been increasingly appreciated following the discovery of superconductivity in the fullerenes and of very large colossal magnetoresistance in the manganite perovskites Indeed these materials are particularly challenging since the Jahn Teller interaction competes with electronic correlation effects Vibronic Interactions and the Jahn Teller Effect Theory and Applications provides an in depth discussion of the Jahn Teller effect and vibronic interactions as reflected by the contributions presented at the XX International Conference on the Jahn Teller effect Fribourg Switzerland 2010 The following topics have been treated in a clear and concise way Complex topologies of Jahn Teller effect and conical intersections Multi state vibronic interactions on strongly coupled potential energy surfaces Interplay of vibronic and spin orbit coupling Strain in Jahn Teller systems and cooperative Jahn Teller effect Orbital ordering and its relation to ferromagnetism ferroelectricity and molecular magnets The

Jahn Teller effect in icosahedral systems The Jahn Teller effect and high temperature superconductivity This book is of interest to a wide audience including academic and industrial theoretical and experimental physicists chemists spectroscopists and crystallographers

Cold Chemistry Olivier Dulieu, Andreas Osterwalder, 2017-12-06 Recent years have seen tremendous progress in research on cold and controlled molecular collisions both in theory and in experiment The advent of techniques to prepare cold and ultracold molecules and ions to store them in optical lattices or in charged quasicrystalline structures and to use them in crossed or merged beam experiments have opened many new possibilities to study the most fundamental aspects of molecular interactions At the same time theoretical work has made progress in tackling these problems and accurately describing quantum effects in complex systems and in proposing viable options to control chemical reactions at ultralow energies Through tutorials on both the theoretical and experimental aspects of research in cold and ultracold molecular collisions this book provides advanced undergraduate students graduate students and researchers with the foundations needed to understand this exciting field NASA Tech Briefs, 1989 **Quantum Mechanics, Volume 3** Claude Cohen-Tannoudji, Bernard Diu, Franck Laloe, 2019-12-16 This new third volume of Cohen Tannoudji's groundbreaking textbook covers advanced topics of quantum mechanics such as uncorrelated and correlated identical particles the quantum theory of the electromagnetic field absorption emission and scattering of photons by atoms and quantum entanglement Written in a didactically unrivalled manner the textbook explains the fundamental concepts in seven chapters which are elaborated in accompanying complements that provide more detailed discussions examples and applications Completing the success story the third and final volume of the quantum mechanics textbook written by 1997 Nobel laureate Claude Cohen Tannoudji and his colleagues Bernard Diu and Franck Lalo As easily comprehensible as possible all steps of the physical background and its mathematical representation are spelled out explicitly Comprehensive in addition to the fundamentals themselves the book comes with a wealth of elaborately explained examples and applications Claude Cohen Tannoudji was a researcher at the Kastler Brossel laboratory of the Ecole Normale Supérieure in Paris where he also studied and received his PhD in 1962 In 1973 he became Professor of atomic and molecular physics at the Collège de France His main research interests were optical pumping quantum optics and atom photon interactions In 1997 Claude Cohen Tannoudji together with Steven Chu and William D Phillips was awarded the Nobel Prize in Physics for his research on laser cooling and trapping of neutral atoms Bernard Diu was Professor at the Denis Diderot University Paris VII He was engaged in research at the Laboratory of Theoretical Physics and High Energy where his focus was on strong interactions physics and statistical mechanics Franck Lalo was a researcher at the Kastler Brossel laboratory of the Ecole Normale Supérieure in Paris His first assignment was with the University of Paris VI before he was appointed to the CNRS the French National Research Center

Matter, Proceedings Of The Nobel Jubilee Symposium T Claeson, P Delsing, 2003-03-21 In 2001 the Nobel Foundation celebrated the 100th anniversary of the first Nobel Prize and all previous Nobel laureates were invited to attend the Nobel ceremonies in Stockholm. This gave an excellent opportunity for arranging jubilee symposia with topics that would attract several of the laureates. The chosen subject of Condensation and Coherence in Condensed Systems attracted sixteen Nobel laureates and another thirty five leading scientists. The idea was to bring scientists together from several related subdisciplines: atomic physics, quantum optics and condensed matter physics for cross breeding of ideas, concepts and experience. Subjects like phase transitions in strongly coupled systems, Bose-Einstein condensation in weakly coupled systems, macroscopic quantum phenomena, coherence in mesoscopic structures and quantum information were intensively discussed from different points of view. Coherence phenomena in condensed systems were emphasized. A special session was devoted to the emerging field of quantum computing with experimental and theoretical results reported for different types of qubits. The 2001 Nobel Prize awarded to Eric Cornell, Wolfgang Ketterle and Carl Wieman for the achievement of Bose-Einstein condensation in dilute gases of alkali atoms and for early fundamental studies of the properties of the condensates gave an extra flavor to the theme of the Centennial Symposium.
