they used to complete a real world research project Authors highlight how they utilized particular tools ideas and practices to support reproducibility emphasizing the very practical how rather than the why or what of conducting reproducible research Part 1 provides an accessible introduction to reproducible research a basic reproducible research project template and a synthesis of lessons learned from across the thirty one case studies Parts 2 and 3 focus on the case studies themselves The Practice of Reproducible Research is an invaluable resource for students and researchers who wish to better understand the practice of data intensive sciences and learn how to make their own research more reproducible **Program Verification**

Timothy T.R. Colburn,J.H. Fetzer,R.L. Rankin,2012-12-06 Among the most important problems confronting computer science is that of developing a paradigm appropriate to the discipline Proponents of formal methods such as John McCarthy C A R Hoare and Edgar Dijkstra have advanced the position that computing is a mathematical activity and that computer science should model itself after mathematics Opponents of formal methods by contrast suggest that programming is the activity which is fundamental to computer science and that there are important differences that distinguish it from mathematics which therefore cannot provide a suitable paradigm Disagreement over the place of formal methods in computer science has recently arisen in the form of renewed interest in the nature and capacity of program verification as a method for establishing the reliability of software systems A paper that appeared in Communications of the ACM entitled Program Verification The Very Idea by James H Fetzer triggered an extended debate that has been discussed in several journals and that has endured for several years engaging the interest of computer scientists both theoretical and applied and of other thinkers from a wide range of backgrounds who want to understand computer science as a domain of inquiry The editors of this collection have brought together many of the most interesting and important studies that contribute to answering questions about the nature and the limits of computer science These include early papers advocating the mathematical paradigm by McCarthy Naur R Floyd and Hoare in Part I others that elaborate the paradigm by Hoare Meyer Naur and Scherlis and Scott in Part II challenges limits and alternatives explored by C Floyd Smith Blum and Naur in Part III and recent work focusing on formal verification by DeMillo Lipton and Perlis Fetzer Cohn and Colburn in Part IV It provides essential resources for further study This volume will appeal to scientists philosophers and laypersons who want to understand the theoretical foundations of computer science and be appropriately positioned to evaluate the scope and limits of the discipline *The Practice of Foreign Language Teaching* Azamat Akbarov,2015-10-05 The Practice of Foreign Language Teaching Theories and Applications is a collection of essays which will appeal to teachers of modern languages no matter the level of instruction The volume analyzes the concepts of foreign language education and multicultural competence including the notion of the intercultural speaker It also discusses the ways in which language education policy develops by comparing the theories and purposes of foreign language education The essays collected here highlight the various different methods and approaches in language teaching and introduce more experienced teachers to new approaches and teaching

ideas The book will also provide language instructors with the theoretical background and practical solutions they need to decide which approaches materials and resources can and should be used in their L2 classrooms Advances in Web Based Learning - ICWL 2007 Howard Leung, Frederick Li, Rynson Lau, Qing Li, 2008-03-14 This year we received a record high of about 180 submissions to ICWL 2007 From these a total of 55 full papers plus one keynote paper were accepted for this LNCS proceedings volume representing an acceptance rate of about 30% The authors of these accepted papers were of a remarkable international diversity We would like to thank all the reviewers for spending their precious time reviewing the papers and for providing valuable comments that aided significantly in the paper selection process Authors of the best papers presented at this conference will be invited to submit extended versions of their papers for possible publication in 1 a special issue of IEEE Trans on Knowledge and Data Engineering for those papers relevant to knowledge and data engineering and 2 a special issue of the International Journal of Distance Education Technologies JDET for papers of other areas This was the first time that the ICWL conference was organized in Europe and 27 papers were from European researchers We would like to thank our Organization Chair Dr Taku Komura for spending an enormous amount of energy in coordinating the local arrangements In fact we would like to thank the entire conference organization committee for their hard work in putting together the conference In particular we would like to express our appreciation to our Registration Chair Dr
