The Pythagorean Theorem Developing Skills In Algebra:

Developing Deep Knowledge in Middle School Mathematics Sergei Abramovich, Michael L. Connell, 2021-05-10 This textbook is for prospective teachers of middle school mathematics. It reflects on the authors' experience in offering various mathematics education courses to prospective teachers in the US and Canada. In particular, the content can support one or more of 24 semester-hour courses recommended by the Conference Board of the Mathematical Sciences 2012 for the mathematical preparation of middle school teachers. The textbook integrates grade-appropriate content on all major topics in the middle school mathematics curriculum with international recommendations for teaching the content, making it relevant for a global readership. The textbook emphasizes the inherent connections between mathematics and real life, since many mathematical concepts and procedures stem from common sense, something that schoolchildren intuitively possess. This focus on teaching formal mathematics with reference to real life and common sense is essential to its pedagogical approach. In addition, the textbook stresses the importance of being able to use technology as an exploratory tool and being familiar with its strengths and weaknesses. In keeping with this emphasis on the use of technology, both physical manipulatives and digital commonly available educational software are explored, e.g., the use of computer graphing software for digital fabrication. In closing, the textbook addresses the issue of creativity as a crucial aspect of education in the digital age, in general, and in mathematics education, in particular.

The Challenge to Care in Schools, 2nd Edition Nel Noddings, 2015-04-26 After a decade of educational reforms, *The Challenge to Care in Schools* is even more relevant now than when it was first published. In her new Introduction, Nel Noddings revisits her seminal book and places care as central to current debates on standardization, accountability, privatization, and the continuous struggle between traditional and progressive methods of education. Rather than forcing one side to yield to the other, this book advocates an alternative responsive system that will allow the best ideas to flourish. In the Second Edition, Noddings once again envisions a school system built on the idea that different people have different strengths and that these strengths should be cultivated in an environment of caring, not of competition. She suggests that if we make the responsiveness characteristic of caring more basic than accountability, we can accommodate both traditional and progressive preferences in one school system to the benefit of

all especially the children Chapters address the practical and theoretical questions involved in organizing traditional and nontraditional areas of study around themes of care Introductory chapters focus on caring in general and on the problems of liberal education while the final chapter offers sound advice for implementing a caring curriculum in our schools Praise for the First Edition A welcome addition to the often fragmented discussion of what children need and what school and education should be Harvard Educational Review I recommend this book to all concerned about education personally and or professionally Journal of Moral Education In the morass of school reform that calls for such changes as national standards improved assessments and new ways of organizing schooling Noddings provides lucid thinking about the priorities we ought to consider Teachers College Record

A Five-Year Study of the First Edition of the Core-Plus Mathematics Curriculum Harold Schoen, Steven W. Ziebarth, Christian R. Hirsch, Allison BrckaLorenz, 2010-07-01 The study reported in this volume adds to the growing body of evaluation studies that focus on the use of NSF funded Standards based high school mathematics curricula Most previous evaluations have studied the impact of field test versions of a curriculum Since these innovative curricula were so new at the time of many of these studies students and teachers were relative novices in their use These earlier studies were mainly one year or less in duration Students in the comparison groups were typically from schools in which some classes used a Standards based curriculum and other classes used a conventional curriculum rather than using the Standards based curriculum with all students as curriculum developers intended The volume reports one of the first studies of the efficacy of Standards based mathematics curricula with all of the following characteristics The study focused on fairly stable implementations of a first edition Standards based high school mathematics curriculum that was used by all students in each of three schools It involved students who experienced up to seven years of Standards based mathematics curricula and instruction in middle school and high school It monitored students mathematical achievement beliefs and attitudes for four years of high school and one year after graduation Prior to the study many of the teachers had one or more years of experience teaching the Standards based curriculum and or professional development focusing on how to implement the curriculum well In the study variations in levels of implementation of the curriculum are described and related to student outcomes and teacher behavior variables Item data and all unpublished testing instruments from this study are available at www.wmich.edu/cmpmp for use as a baseline of instruments and data for future curriculum evaluators or Core Plus Mathematics users who may wish to compare results of new groups of students to those in the present study on common tests or surveys Taken together this volume the supplement at the CPMP Web site and the first edition Core Plus Mathematics curriculum materials samples of which are also available at the Web site serve as a fairly complete description of the nature and impact of an exemplar of first edition NSF funded Standards based high school mathematics curricula as it existed and was implemented with all students in three schools around the turn of the 21st century
