Education for Effective Thinking William Henry Burton, 1960 Thinking as an objective of education. Teaching students to think is one of the most commonly expressed aims of education generally and in almost any subject field. Authorities almost without end could be cited as upholding this as one aim of education. The Harvard Report General Education in a free society to cite but one says Education is not merely the imparting of knowledge but the cultivation of certain aptitudes and attitudes in the mind of the young. These abilities in our opinion are to think effectively to communicate thought to make relevant judgments to discriminate among values. The abilities listed represent a large part of the subject matter of our book.

Using Internet Primary Sources to Teach Critical Thinking Skills in Mathematics Evan M. Glazer, 2001-08-30 Mathematics teachers and school library media specialists will find this book a valuable resource for using the Web to promote critical thinking in the high school mathematics classroom. It is filled with instructional strategies and an expansive set of activities that cover a broad array of mathematics topics spanning from prealgebra through calculus. Teachers using the questions and activities in this book will help their students meet the standards set forth by the National Council for Teachers of Mathematics. Various types of mathematics-related sources on the Internet are outlined within this book, including data and simulations related to real-world situations such as saving funds and computing interest earned for college, purchasing a home, or decoding train and plane schedules. The author develops a framework for critical thinking in mathematics and helps teachers create a supportive classroom environment. Each activity highlights a web source, the mathematics topics involved, the appropriate grade levels of study, possible student investigations, and related web sources for continued exploration promoting a student-centered inquiry.

In an effort to make advanced mathematics accessible to a wide variety of students and to give even the most mathematically inclined students a solid basis upon which to build their continuing study of mathematics there has been a tendency in recent years to introduce students to the formulation and writing of rigorous mathematical proofs and to teach topics such as sets functions relations and countability in a transition course rather than in traditional courses such as linear algebra A transition course functions as a bridge between computational courses such as Calculus and more theoretical courses such as linear algebra and abstract algebra This text contains core topics that I believe any transition course should cover as well as some optional material intended to give the instructor some flexibility in designing a course The presentation is straightforward and focuses on the essentials without being too elementary too excessively pedagogical and too full to

distractions Some of features of this text are the following 1 Symbolic logic and the use of logical notation are kept to a minimum We discuss only what is absolutely necessary as is the case in most advanced mathematics courses that are not focused on logic per se
