George Eliot and Nineteenth-Century Psychology

Michael Davis, 2016-12-05

In his study of Eliot as a psychological novelist Michael Davis examines Eliot's writings in the context of a large volume of nineteenth century scientific writing about the mind Eliot Davis argues manipulated scientific language in often subversive ways to propose a vision of mind as both fundamentally connected to the external world and radically isolated from and independent of that world In showing the alignments between Eliot's work and the formulations of such key thinkers as Herbert Spencer Charles Darwin T H Huxley and G H Lewes Davis reveals how Eliot responds both creatively and critically to contemporary theories of mind as she explores such fundamental issues as the mind body relationship the mind in evolutionary theory the significance of reason and emotion and consciousness Davis also points to important parallels between Eliot's work and new and future developments in psychology particularly in the work of William James In *Middlemarch* for example Eliot demonstrates more clearly than either Lewes or James the way the conscious self is shaped by language Davis concludes by showing that the complexity of mind which Eliot expresses through her imaginative use of scientific language takes on a potentially theological significance His book suggests a new trajectory for scholars exploring George Eliot's representations of the self in the context of science society and religious faith
