**Reconfigurable Control of Nonlinear Dynamical Systems** Jan H. Richter, 2011-01-16 This research monograph summarizes solutions to reconfigurable fault tolerant control problems for nonlinear dynamical systems that are based on the fault hiding principle. It emphasizes but is not limited to complete actuator and sensor failures. In the first part the monograph starts with a broad introduction of the control reconfiguration problems and objectives as well as summaries and explanations of solutions for linear dynamical systems. The solution is always a reconfiguration block which consists of linear virtual actuators in the case of actuator faults and linear virtual sensors in the case of sensor faults. The main advantage of the fault hiding concept is the reusability of the nominal controller which remains in the loop as an active system while the virtual actuator and sensor adapt the control input and the measured output to the fault scenario. The second and third parts extend virtual actuators and virtual sensors towards the classes of Hammerstein Wiener systems and piecewise affine systems. The main analyses concern stability, recovery, setpoint tracking, recovery and performance recovery as reconfiguration objectives. The fourth part concludes the monograph with descriptions of practical implementations and case studies. The book is primarily intended for active researchers and practicing engineers in the field of fault tolerant control. Due to many running examples it is also suitable for interested graduate students. Emerging Informatics Shah Jahan Miah, 2012-04-20 The book on emerging informatics brings together the new concepts and applications that will help define and outline problem solving methods and features in designing business and human systems. It covers international aspects of information systems design in which many relevant technologies are introduced for the welfare of human and business systems. This initiative can be viewed as an emergent area of informatics that helps better conceptualise and design new world class solutions. The book provides four flexible sections that accommodate total of fourteen chapters. The section specifies learning contexts in emerging fields. Each chapter presents a clear basis through the problem conception and its applicable technological solutions. I hope this will help further exploration of knowledge in the informatics discipline.

**Inbetriebnahme und Erprobung des SIMATIC S7-Tools "Web Navigator"** Andreas Steinhart, 2002-09-05  
Inhaltsangabe: Einleitung: Wissen was wo Luft und darauf richtig reagieren wurde in den letzten Jahren immer wichtiger. Durch die zunehmende Automatisierung von komplexen Fertigungsanlagen gewinnt das Bedienen und Beobachten von Prozessen zunehmend an Bedeutung, denn es gilt den Prozess zu beherrschen. Maschinen und Anlagen optimal am Laufen zu halten und immer geringere Standzeiten zu realisieren, um wettbewerbsfähig zu bleiben. Auch die vertikale Integration spielt dabei eine immer wichtigere Rolle, da Informationen zu Fertigungsprozessen längst nicht mehr nur in der Fertigungsebene, sondern auch in Konstruktion, Arbeitsvorbereitung, dem Einkauf und Verkauf bis hin zum Management von Bedeutung sind. Ziel der vorliegenden Arbeit, die im Zeitraum von September 2001 bis März 2002 an der Fachhochschule Ravensburg Weingarten entstand, war die Einführung des SIEMENS WinCC Web Navigator mit der Möglichkeit Prozesse über das Internet
