Descartes rule of sign.

The rule states that if the terms of a single-variable polynomial with real coefficients are ordered by descending variable exponent, then the number of positive roots of the polynomial is either equal to the number of sign differences between consecutive nonzero coefficients, or is less than it by an even number. Multiple roots of the same value are counted separately.

How many blenders must the firm produce to break even?

5. The rabbit population on a small island is observed to be given by the function.
