These are exciting times for philosophical theorizing about propositions with the last 15 years seeing the development of new approaches and the emergence of new theorists Propositions have been invoked to explain thought and cognition the nature and attribution of mental states language and communication and in philosophical treatments of truth necessity and possibility According to Frege and Russell and their followers propositions are structured mind and language independent abstract objects which have essential and intrinsic truth conditions Some recent theorizing doubts whether propositions really exist and if they do asks how we can grasp entertain and know them But most of the doubt concerns whether the abstract approach to propositions can really explain them Are propositions really structured and if so where does their structure come from How does this structure form a unity and does it need to Are the representational and structural properties of propositions really independent of those of thinking and language What does it mean to say that an object occurs in or is a constituent of a proposition The volume takes up these and other questions both as they apply to the abstract object approach and also to the more recently developed approaches While the volume as a whole does not definitively and unequivocally reject the abstract objection approach for the most part the papers explore new critical and constructive directions This book was originally published as a special issue of the Canadian Journal of Philosophy [The Switch Image](#) Lorenz Engell,2021-04-22 Television is the most powerful system of images in the late 20th and early 21st centuries Nonetheless TV has attained only little philosophical attention so far especially compared to other visual media such as film This book looks at TV as what happens on the screen and beyond it which is mainly the operation of switching images It

therefore proposes a new definition of TV as the first picture that can be switched on off and over which stresses that TV is more tactile than visual Through the operation of switching TV figures the world from within and as the course of its figuration This is grasped here by the term of ontography Through the ongoing interlacing and bridging of TV 1 0 the image is being switched and TV 2 0 the image is a switch TV exponentially increases the production and circulation of images It transforms the world and itself from an analogue state to a digital one and from central perspectivism to pluri perspective In terms of time through switching and the switch it develops and reworks new temporal orderings such as instantaneity synchronicity flow and seriality TV makes its own history In space it creates a mediasphere as its habitat and hence new forms of being in the world of proximity and distance and scale Anthropologically it works on what a subject and an object is on what makes the human being and ontographically how it is possible that there is something at all instead of nothing through switch images

**The Juridical Act** H. D. S. van der Kaaij, 2019-06-13 This book puts forward a new theoretical concept of the juridical act this concept is not described from the perspective of a specific national legal system but instead represents the commonalities and ideas that stem from the Western legal tradition Since the concept is system independent it does not rely on national or state laws The book begins by detailing those characteristics that distinguish juridical acts from the general group of acts It offers clear distinctions between the different aspects of juridical acts such as the power and the competence needed in order to perform the act the fact that juridical acts are constitutive speech acts and the rules that connect the act with its consequences In the process the book dispels much of the haziness currently surrounding juridical acts Developed with a mix of theory and practice this new concept is better equipped to deal with modern trends and practices Further since the author has freed the idea of the juridical act from the bonds of history and geography it is also more suited to facilitating a better understanding of and explaining changes in the legal landscape such as the rise of computer technology Accordingly it offers scholars and practitioners alike a valuable new tool for explaining and theorizing about the law

**The Self-Conscious, Thinking Subject** Robert Abele, 2021-08-18 This book argues that the primary function of human thinking in language is to make judgments which are logical normative connections of concepts Robert Abele points out that this presupposes cognitive conditions that cannot be accounted for by empirical linguistic analyses of language content or social conditions alone Judgments rather assume both reason and a unified subject and this requires recognition of a Kantian type of transcendental dimension to them Judgments are related to perception in that both are syntheses defined as the unity of representations according to a rule form Perceptual syntheses are simultaneously pre linguistic and proto rational and the understanding Kant s Verstand makes these syntheses conceptually and thus self consciously explicit Abele concludes with a transcendental critique of postmodernism and what its deflationary view of ontological categories such as the unified and reasoning subject has done to political thinking He presents an alternative that calls for a return to normativity and a recognition of reason objectivity and the universality of principles
