

# States of Matter & Phase Changes

## Why?

Most substances go through a phase change when heated or cooled. Molecules of a substance are held together in either the solid, liquid, or gaseous phase by intermolecular forces. It is necessary to discuss what is occurring at the molecular level in order to explain how an ice cube is melted or how water is boiled.

## New Concepts

- Heating / cooling curves
- Intermolecular Forces

## Learning Objective:

- To determine what is occurring on the molecular level during a phase change

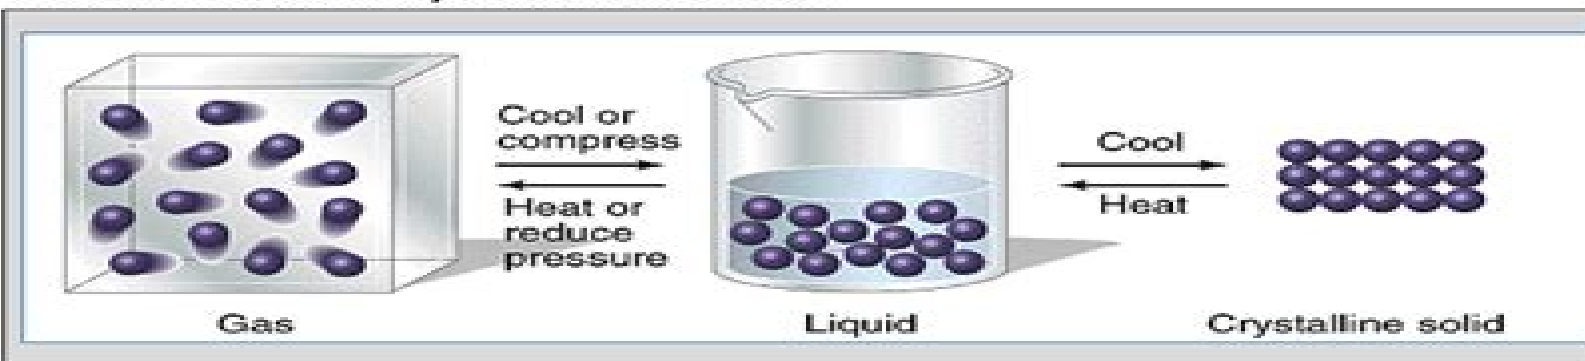

## Success Criteria

- Students will be able to construct their own heating or cooling curve when given the temperatures at which phase changes occur.
- Students will be able to explain the heating curve on the micro-view.

## Prerequisites

- Temperature (average kinetic energy)
- Phases of matter: solid, liquid, gas
- Molecules (particles)

## Model 1: Kinetic Theory and States of Matter

1. What are the key characteristics of atoms and molecules in gases, liquids, and solids? In table 1 below, describe the characteristics of particles for each phase of matter based on Model 1 above. Be specific.
