many works of science fiction engage recognized canonical texts such as the *Odyssey* and many traditionally canonical works contain elements of science fiction. More recently the canon has been subject to revision as scholars have deliberately sought to include works that reflect diversity and have participated in the serious study of popular culture. But these attempts to create a more inclusive canon have nonetheless continued to marginalize science fiction. This book examines the treatment of science fiction within the academy. The expert contributors to this volume explore a wide range of topics related to the place of science fiction in literary studies. These include academic attitudes toward science fiction, the role of journals and cultural gatekeepers in canon formation and the marginalization of specific works and authors by literary critics. In addition, the volume gives special attention to multicultural and feminist concerns. In discussing these topics, the book sheds considerable light on much broader issues related to the politics of literary studies and academic inquiry.

Science Fiction and the Dismal Science Gary Westfahl, Gregory Benford, Howard V. Hendrix, 2019-12-10 Despite the growing importance of economics in our lives, literary scholars have long been reluctant to consider economic issues as they examine key texts. This volume seeks to fill one of these conspicuous gaps in the critical literature by focusing on various connections between science fiction and economics, with some attention to related fields such as politics and government. Its seventeen contributors include five award-winning scholars, five science fiction writers, and a widely published economist. Three topics are covered: what noted science fiction writers like Robert A. Heinlein, Frank Herbert, and Kim Stanley Robinson have had to say about our economic and political future; how the competitive and ever-changing publishing marketplace has affected the growth and development of science fiction from the nineteenth century to today; and how the scholars who examine science fiction have themselves been influenced by the economics of academia. Although the essays focus primarily on American science fiction, the traditions of Russian and Chinese science fiction are also examined. A comprehensive bibliography of works related to science fiction and economics will assist other readers and critics who are interested in this subject.

Daughters of Earth Justine Larbalestier, 2006-05-22 Women's contributions to science fiction have been lasting and important. This is a collection of 11 key stories alongside 11 essays that explore the stories' contexts, meanings, and theoretical implications. Organized chronologically, it aims to create a different canon of feminist science fiction and examines the theory that addresses it.

Neocybernetics and Narrative Bruce Clarke, 2014-09-15

Neocybernetics and Narrative opens a new chapter in Bruce Clarke's project of rethinking narrative and media through systems theory. Reconceiving interrelations among subjects media significations and the social this study demonstrates second order systems theory's potential to provide fresh insights into the familiar topics of media studies and narrative theory. A pioneer of systems narratology Clarke offers readers a synthesis of the neocybernetic theories of cognition formulated by biologists Humberto Maturana and Francisco Varela incubated by cyberneticist Heinz von Foerster and cultivated in Niklas Luhmann's social systems theory. From this foundation he interrogates media theory and narrative theory through a critique of information theory in favor of autopoietic conceptions of

cognition Clarke's purview includes examinations of novels *Mrs Dalloway* and *Mind of My Mind* movies *Avatar* *Memento* and *Eternal Sunshine of the Spotless Mind* and even Aramis Bruno Latour's idiosyncratic meditation on a failed plan for an automated subway Clarke declares the era of the cyborg to have ended laid to rest as the ontology of technical objects is brought into differential coordination with operations of living psychic and social systems The second order discourse of cognition destabilizes the usual sense of cognition as conscious awareness revealing the possibility of nonconscious and nonhuman forms of sentience
