The Reluctant Reindeer:

Reluctant Conquest Kathryn C. Lavelle, 2025-06-10 A comprehensive history of U S involvement in the Arctic from the American Revolution through the acquisition of Alaska to the present day What drives American foreign relations in the Arctic It is difficult to give a unified answer to this question because most histories of the region are divided between the Atlantic and Pacific coasts Asian and European strategic interests or federal government and Indigenous peoples concerns making it difficult to understand the connections among the environmental challenges scientific understandings strategic calculations and governance relationships Most Americans do not think of their country as an Arctic power yet it is a region where the United States has had important ties throughout its history In this sweeping study from the founding of the country through the acquisition of Alaska to the present Kathryn C Lavelle considers American relations across the circumpolar North incorporating discussions of economics national security and science that are conventionally separated Lavelle argues that it is impossible to understand U S policy without a knowledge of American political development and of how scientific understandings have grown alongside studies of climate and other environmental issues This history has important implications for future American policy regarding traditional national security and political economy in addition to climate change and environmental cooperation

Pelto,1987 Sustainability Networks Janne Hukkinen,2008-08-18 Sustainability is a word that means different things depending on who is using it thus underlining the potential problems involved in experts from different fields teaming up to tackle sustainability problems In this book Janne Hukkinen argues for a reflexive approach to sustainability as a means of coming to grips with the threatening challenges arising out of human environment interaction The author illustrates his argument with a case study of natural resource management in Lapland showing how sustainability is understood holistically by academics and professionals alike This book reflects an emerging cognitive turn in sustainability sciences conceptualizing environmental challenges during action on our social and material environments rather than in isolation Hukkinen argues that this conceptual blending enables sustainability experts to hybridize themselves to immerse themselves in the fields of other experts and imagine the other s work both prerequisites of trans disciplinary knowledge integration This book shows how sustainability experts can reveal their intellectual engagements when designing scenarios and indicators and presents a rigorous framework for organizing expert collaboration **Motion Pictures** ,1960 **The Proposed Nordic Saami**
