1.1. Shopping costs

- The government's report uses a large sample size. $n = 1,000,000,000,000$
- No, this country's mean house price could be the same as the national average because BEC's test is far-from-random (biased)
- $SE = \sqrt{\frac{1}{n} \times 100^2} = 10000 = 10,000 \left(\sqrt{\frac{10000}{1000000000000}} \right) = 10,000 \times 10^{-6} = 0.01$ or 1%

We need to sample approximately 1,000,000,000,000 houses prices with 400,000 $1\% = 1,000,000$

1.2. Gas mileage

$P = 0.0001$ is strong evidence that the gas mileage of automobiles coming off the assembly line after the manufacturing adjustment has been increased. We can't be confident that the mean gas mileage has increased because 0.18 and 0.22 million gas gallons.

1.4. Improving productivity

- $H_0: \mu_{\text{old}} = 50$ $H_1: \mu_{\text{old}} > 50$
- A Type I error would be very expensive for the packing company, as Type I errors would mean that the manager rejected the null hypothesis when in fact the null hypothesis is true. In this situation, by rejecting the null hypothesis the company thought the training improved productivity, so they paid for the construction for all employees. In reality, the training did not improve productivity so the company wasted money constructing their new tool.
- To decrease the power of the test, we could increase the level of significance α to 1, or increase the sample size. Increasing the level of significance would lead to adopting a training method that actually does not improve productivity. By increasing the sample size, the test would become and the test might later prove true.

1.5. Hypothesis

- The statistical procedure we would use for the test for the difference of means.
- Independent groups: Data from each test were statistically independent.
- Randomization: The sample of the response variable was randomly selected.
- 1-10 condition: There were more than 10 students in each of the two groups (from both test and control, so a sample of 10 is less than 10% of all students in each).
- Normality condition: The data of the test were close to the test are roughly symmetric, but the control data were from the test are very skewed. We cannot satisfy this condition, so we cannot proceed with the test.
