Multi-Storey Buildings Ian Smith, Andrea Frangi, 2014-01-01 Since the dawn of civilization timber has been a primary material for achieving great structural engineering feats Yet during the late 19th century and most of the 20th century it lost

currency as a preferred material for construction of large and tall multi storey building superstructures This Structural Engineering Document SED addresses a reawakening of interest in timber and timber based products as primary construction materials for relatively tall multi storey buildings Emphasis throughout is on holistically addressing various aspects of performance of complete systems reflecting that major gaps in knowhow relate to design concepts rather than technical information about timber as a material Special consideration is given to structural form fire vulnerability and durability aspects for attaining desired building performance over lifespans that can be centuries long
