The Behaviour and Design of Steel Structures to EC3, Fourth Edition
N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21
The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950. The principal feature of the fourth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3. Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components. Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices. The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process. *The Behaviour and Design of Steel Structures to EC3* is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries.

Design of Joints in Steel Structures ECCS - European Convention for Constructional Steelwork, 2017-06-29
This book details the basic concepts and the design rules included in Eurocode 3 Design of steel structures Part 1-8 Design of joints. Joints in composite construction are also addressed through references to Eurocode 4 Design of composite steel and concrete structures Part 1-1 General rules and rules for buildings. Moreover the relevant UK National Annexes are also taken into account. Attention has to be duly paid to the joints when designing a steel or composite structure in terms of the global safety of the construction and also in terms of the overall cost including fabrication, transportation and erection. Therefore in this book the design of the joints themselves is widely detailed and aspects of selection of joint configuration and integration of the joints into the analysis and the design process of the whole construction are also fully covered. Connections using mechanical fasteners, welded connections, simple joints, moment resisting joints and lattice girder joints are considered. Various joint configurations are treated including beam to column, beam to beam, column bases and beam and column splice configurations under different loading situations: axial forces, shear forces, bending moments and their combinations. The book also briefly summarises the available knowledge relating to the application of the Eurocode rules to joints under fire, fatigue, earthquake etc and also to joints in a structure subjected to exceptional loadings where the risk of progressive collapse has to be mitigated. Finally there are some worked examples plus references to already published examples and to design tools which will provide practical help to practitioners.
