The Realities of 'Reality' - Part III: Impacts of Speed and Time Optimization on Reality Fritz Dufour, MBA, DESS, 2019-08-28 The main theme of this book is the impacts of speed and time optimization on reality or more precisely on our modern society But first it sets the background by exploring the physics behind the concepts of speed and time how they came about how we became aware of them and how did the new world of speed emerge and why does it seem to be inescapable It explores the speed of light and the speed of sound by linking them to our environment It introduces the notion of Arrow of time or entropy which grows from the past to the present is expected to keep growing in the future and hypothesizes that this is perhaps why our craving for speed and time optimization is here to stay with no end in sight An important point discussed is that because of memories and experiences people may choose to live either in the past present or future which leads to the notions of presentism and eternalism The book argues that while for presentists only the present is real for eternalists both the past present and future are equally real The book makes the case about speed and time optimization as a legacy of modernity by laying out the differences between modernism modernization and modernity itself It shows how modernity is all about the now or the present rather than the past and how as such it is all about the new So then the changes that are now happening in our modern world can be traced back to a segment of history that dates back to the beginning of modernity that is which began with the Protestant Reformation and is now rapidly approaching closure in the world of today's extreme finance It argues about the technological implications of speed and time in the 21st century It shows how technology has become an integral part of human existence and that it is inconceivable one can even think of escaping it This Part III of the series shows the link between high speed trading and faster connectivity and faster computers It shows how thanks to the Internet information became freely accessible and is spreading faster and faster It shows how supercomputers not only allow people to address the biggest and most complex problems they also allow people to solve problems faster even those that could fit on servers or clusters of PCs This rapid time to solution is critical in some aspects of emergency preparedness and national defense where the solutions produced are only valuable if they can be acted on in a timely manner Finally the social and psychological implications of speed and time in the 21st century are also addressed by considering the upside and the downside of moving fast meaning leading a fast paced life The argument presented in the book is based on the analysis and the importance of stress in our daily lives and also explains the notion of chronobiology Our biological clocks drive our circadian rhythms An interesting point is that blind people may not perceive time the same way as the non blind Furthermore the book shows how we perceive time differently as we age compared to when we were young It

also makes the case for the perception of time in dreams and in real life Speed and time optimization may be deceiving according to this Part III of the series This can be proven by questions such as 1 Is going over the speed limit really worth it and 2 Is the saying Slow down to go faster a paradox

Practical Criticism Martin Coyle, John Peck, 1995-11-11 Practical criticism underlies everything students of English literature do It is a way of reading the text closely but with a grasp of the larger issues involved This book is a practical step by step guide which shows the student how to gain a sense of what a poem or passage of prose or drama is about how to analyse it and how to build a successful essay Easy to read and uncluttered by technical vocabulary it will prove an invaluable resource for any student
