Title: Stemming Out!

I. Introduction

- a. *For the various incompatible situations out there in the world, there is a contemporary option for people to think about: Embryonic Stem Cells.*
- b. *Stem cell research should be well funded and reinforced by all, for the new developments that may be brought upon those in need.*

II. Background

- a. *The embryonic stem cells provide long term effects rather than seemingly short compared to adult stem cells.*

III. Stakes and Stakeholders

- a. Stakes: *If embryonic stem cells comes to be successful in every treatment, it would help many in treatments that do not have possible treatments or cannot be fulfilled by adult stem cells. If embryonic cells do not prove to successful in treatments, it would show the medical field what needs to be improved and what can be changed for better treatments.*
- b. Stakeholders: *Medical field professionals, patients, people in concern about such a procedure, fertility clinics*

IV. Paragraph I:

- a. Topic: *Embryonic stem cells tend to provide broaden substance over an adult stem cell, due to its stage of developing into further specialized cells.*
- b. Evidence: *According to Thompson from Wisconsin Regional Primate Research Center, "These results demonstrate the pluripotency of single human ES cells, the maintenance of pluripotency during an extended period of culture, and the*

of writing tasks faced by professional biologists Neuroinflammation, Neurodegeneration and Metabolic Disease: From Molecular Mechanisms to Therapeutic Innovation Fawaz Alzaid, Mohammed Al-Onaizi, Ayman ElAli, 2024-09-05

Neuroinflammation manifests as changes to cognition or behavior or as altered function in peripheral tissues. Patients with metabolic diseases e.g. diabetes, obesity are more likely to suffer with neuroinflammation since the disrupted metabolism and chronic low grade inflammation that accompany metabolic diseases extends to the nervous system. Neuroinflammation will then lead to functional impairment and progressive loss of neuronal structure with neurodegeneration being the end result. Factors like chronic hyperglycemia, dyslipidemia and insulin resistance are candidate drivers of neuroinflammation and neurodegeneration. The effects on the nervous system also contribute to worsening insulin resistance and a further loss of metabolic function and homeostasis in innervated peripheral tissues e.g. liver, adipose tissue. Persistent metabolic stress predisposes patients to peripheral neuropathies, cognitive dysfunction and development of neurodegenerative diseases e.g. Alzheimer's disease. Multiple associations link metabolic disease to neuropathology. Targeting neuroinflammation to preserve neuronal integrity holds promise for managing metabolic diseases and associated neurological complications. Research on Neuroinflammation, Neurodegeneration and Metabolic Disease: From Molecular Mechanisms to Therapeutic Innovation is necessary to address several critical gaps in our understanding and treatment of metabolic diseases and of neuropathology. Firstly, while the role of systemic inflammation in metabolic diseases has been extensively studied, the specific impact of nervous system inflammation, neuroinflammation and resulting neurodegeneration on these conditions is still an emerging field. Investigating the mechanisms by which neuroinflammation and neurodegeneration contribute to metabolic diseases can provide valuable insights into the pathogenesis and progression of these conditions.

Advances and Challenges in Stroke Therapy: A Regenerative Prospective, volume II Syed Shadab Raza, Viola B. Morris, Hassan Azari, 2025-02-13. This Research Topic is the second volume of Research Topic: Advances and Challenges in Stroke Therapy: A Regenerative Prospective. Please see the first volume here. Stroke is the 3rd leading cause of human death and the first major cause of long term disability worldwide. Stroke represents an enormous socioeconomic burden, thus highlighting the urgent need for effective treatments. Thrombolysis with recombinant tissue plasminogen activator (rtPA) is the only FDA approved therapy to re-establish cerebral blood flow. However, the non-availability of rtPA and because of the increased risk of haemorrhage beyond 4.5 h post-stroke, only a few stroke patients (1-2%) get to benefit from it. Apart from rtPA, the current treatment therapies are far from being the ideal solution, emphasizing the urgent need for alternative strategies for replacing damaged tissue.

Ocular Myasthenia Gravis Qing Zhou, Jian Chen, 2025-03-03. This book mainly introduces the progress of ocular myasthenia gravis from the aspects of epidemiology, etiology and inducement, pathogenesis, clinical features, auxiliary examination, diagnosis and differential diagnosis and treatment etc. In addition to cover some progress in the treatment of ocular myasthenia gravis, the authors also discuss some issues with controversial. The diagnosis of ocular myasthenia gravis mainly depends on the clinical

manifestations of the patient and patients often do not seek medical treatment until they have obvious ptosis or double vision which is easy to be missed and misdiagnosed Treatment for ocular myasthenia gravis is mainly to relieve ocular symptoms and delay or prevent progression from ocular myasthenia gravis OMG to generalized myasthenia gravis GMG The authors highlight the early and correct diagnosis and treatment of OMG which is the key to improve patients quality of life and reduce OMG conversion rate The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content so that the book will read stylistically different from a conventional translation

Analysis and Visualization of Citation Networks Dangzhi Zhao,Andreas Strotmann,2022-06-01 Citation analysis the exploration of reference patterns in the scholarly and scientific literature has long been applied in a number of social

sciences to study research impact knowledge flows and knowledge networks It has important information science applications as well particularly in knowledge representation and in information retrieval Recent years have seen a burgeoning interest in citation analysis to help address research management or information service issues such as university rankings research evaluation or knowledge domain visualization This renewed and growing interest stems from significant improvements in the availability and accessibility of digital bibliographic data both citation and full text and of relevant computer technologies The former provides large amounts of data and the latter the necessary tools for researchers to conduct new types of large scale citation analysis even without special access to special data collections Exciting new developments are emerging this way in many aspects of citation analysis This book critically examines both theory and practical techniques of citation network analysis and visualization one of the two main types of citation analysis the other being evaluative citation analysis To set the context for its main theme the book begins with a discussion of the foundations of citation analysis in general including an overview of what can and what cannot be done with citation analysis Chapter 1 An in depth examination of the generally accepted steps and procedures for citation network analysis follows including the concepts and techniques that are associated with each step Chapter 2 Individual issues that are particularly important in citation network analysis are then scrutinized namely field delineation and data sources for citation analysis Chapter 3 disambiguation of names and references Chapter 4 and visualization of citation networks Chapter 5 Sufficient technical detail is provided in each chapter so the book can serve as a practical how to guide to conducting citation network analysis and visualization studies While the discussion of most of the topics in this book applies to all types of citation analysis the structure of the text and the details of procedures examples and tools covered here are geared to citation network analysis rather than evaluative citation analysis This conscious choice was based on the authors observation that compared to evaluative citation analysis citation network analysis has not been covered nearly as well by dedicated books despite the fact that it has not been subject to nearly as much severe criticism and has been substantially enriched in recent years with new theory and techniques from research areas such as network science social network analysis or information visualization Table of Contents Acknowledgment Dedications Foundations of Citation Analysis Conducting Citation Network Analysis Steps Concepts Techniques and Tools Field Delineation and Data Sources for Citation Analysis Disambiguation in Citation Network Analysis Visualization of Citation Networks Appendix 3 3 Appendix 5 4 2 Bibliography Author Biographies

There is a widely held conception that progress in science and technology is our salvation and the more of it the better This however is an oversimplified and even dangerous attitude While the future will certainly offer huge changes due to such progress it is far from certain that all of these changes will be for the better The unprecedented rate of technological development that the 20th century witnessed has made our lives today vastly different from those in 1900 No slowdown is in sight and the 21st century will most likely see even more revolutionary changes than the 20th due to advances in science technology and medicine Particular areas where extraordinary and perhaps disruptive advances can be expected include biotechnology nanotechnology and machine intelligence We may also look forward various ways to enhance human cognitive and other abilities using e g pharmaceuticals genetic engineering or machine brain interfaces perhaps to the extent of changing human nature beyond what we currently think of as human and into a posthuman era The potential benefits of all these technologies are enormous but so are the risks including the possibility of human extinction This book is a passionate plea for doing our best to map the territories ahead of us and for acting with foresight so as to maximize our chances of reaping the benefits of the new technologies while avoiding the dangers **Bioethics in Singapore** John Elliott, W. Calvin Ho, Sylvia S. N. Lim, 2010

This book provides an analysis of the ways in which the BAC has established an ethical framework for biomedical research in Singapore following the launch of the Biomedical Sciences Initiative by the Singapore Government The editors and authors have an intimate knowledge of the working of the BAC and the focus of the book includes the ways in which international forces have influenced the form and substance of bioethics in Singapore Together the authors offer a comparative account of the institutionalisation of biomedical research ethics in Singapore considered in the wider context of international regulatory efforts The book reviews the work of the BAC by placing it within the broader cultural social and political discourses that have emerged in relation to the life sciences since the turn of the 21st century This book is not primarily intended to be a retrospect or an appraisal of the contribution of the BAC though this is one aspect of it Rather the main intention is to make a substantive contribution to the rapidly emerging field of bioethics Ethical discussions in the book include consideration of stem cell research and cloning genetics and research with human participants and focus on likely

future developments as well as the past Many of the contributors of the book have been personally involved in this work and hence they write with an authoritative first hand knowledge that scholars in bioethics and public policy may appreciate As indicated above the book also explains the way in which ethics and science international and local have interacted in a policy setting Scholars and policy makers may find the Singaporean experience to be a valuable resource as the approach has been to make the ethical governance of research in Singapore consistent with international best practice while observing the requirements of a properly localised application of universally accepted principles In addition at least three chapters the first three chapters in particular are accessible to the lay reader interested in the development of bioethics and biomedical sciences both inside and outside Singapore from 2000 the year in which the BAC was established Both scholars and interested lay readers are therefore likely to find this publication a valuable reference
