

CHAPTER 15

QUESTIONS

1. The principal advantages to a lessee in leasing rather than purchasing property are as follows:
 - (a) Frequently, *no down payment* is required to attain access to property when it is leased. This frees company capital to be used for purposes such as expanding production, reducing long-term debt, or providing for future pension benefits.
 - (b) A lease *avoids the risks of ownership* when a company has many uncertainties as to the length of benefit from various assets. If a company purchases assets, any obsolescence or reduction in usefulness of the asset would result in a loss. A lease leaves these risks of ownership with the lessor rather than shifting them to the lessee.
 - (c) Leases give the lessee *flexibility* to get a different asset if market conditions or technological changes require it.
2. The principal advantages to a lessor in leasing property rather than selling it are as follows:
 - (a) Lease contracts provide another alternative to those businesses needing property for customers to acquire their services. This can *increase the volume of sales* and thus improve the operating position of the manufacturer.
 - (b) Because a lease arrangement results in an *ongoing business relationship*, there may be other business dealings that could develop between the lessee and lessor.
 - (c) The lease arrangement may be negotiated so that any *residual value* remains with the lessor. Although expected residual values are usually considered in arriving at the financial terms of a lease, these estimates usually are conservative. Thus, lessors may benefit from a higher residual value at the end of the lease term than expected when the lease was negotiated.
3. A *capital lease* is accounted for as if the lease agreement transfers ownership of the asset from the lessor to the lessee. Capital leases are generally long term, covering most of the economic life of the leased asset, and the lease payments are large enough that they effectively pay for the asset by the end of the lease term. An *operating lease*, on the other hand, is accounted for as rental agreement, with no transfer of effective ownership associated with the lease.
4. Leases frequently give the lessee the option to purchase the leased asset at some future date. If the price specified in the purchase option is so low that it is almost certain that the lessee will end up buying the leased asset, the option is called a *bargain purchase option*. Because leases with bargain purchase options are likely to lead to transfer of ownership from the lessor to the lessee, they are accounted for as capital leases.
5. The *lease term* begins when leased property is transferred to the lessee and extends to the end of the period for which the lessee is expected to use the property, including any periods covered by bargain renewal options. If a bargain purchase option is included in the lease agreement, the term ends on the date this option is available.
6.
 - (a) A lessee will use the lower of its incremental borrowing rate and the implicit rate in the lease agreement (if known by the lessee). If the rate used results in a capitalized value for the lease that is greater than the fair value of the lease property at the beginning of the lease term, the fair value should be used as the asset value.
 - (b) A lessor will use the interest rate implicit in the terms of the lease. This is the rate that will discount the minimum lease payments plus any unguaranteed residual value to the fair value of the leased asset.
