From Mobility to Accessibility Jonathan Levine, Joe Grengs, Louis A. Merlin, 2019-11-15 Levine Grengs and Merlin marshal a compelling case to shift to accessibility oriented planning providing much needed conceptual clarity as to what accessibility is and is not But their book also represents a major step toward transforming accessibility from a vaguely defined aspiration into concrete measures that can guide planning decisions *Journal of the American Planning Association* In *From Mobility to Accessibility* an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance Jonathan Levine Joe Grengs and Louis A Merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people s ability to reach destinations rather than on their ability to travel fast Existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation But it is the ability to reach destinations not movement per se that people seek from their

transportation systems While the concept of accessibility has been around for the better part of a century From Mobility to Accessibility shows that the accessibility shift is compelled by the fundamental purpose of transportation The book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the nature of accessibility and its potential for guiding development of the built environment By redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas **The CRC Handbook of**

Advancing Equity Planning Now Norman Krumholz, Kathryn Wertheim Hexter, 2019-01-15 What can planners do to restore equity to their craft Drawing upon the perspectives of a diverse group of planning experts Advancing Equity Planning Now places the concepts of fairness and equal access squarely in the center of planning research and practice Editors Norman Krumholz and Kathryn Wertheim Hexter provide essential resources for city leaders and planners as well as for students and others interested in shaping the built environment for a more just world Advancing Equity Planning Now remind us that equity has always been an integral consideration in the planning profession The historic roots of that ethical commitment go back more than a century Yet a trend of growing inequality in America as well as other recent socio economic changes that divide the wealthiest from the middle and working classes challenge the notion that a rising economic tide lifts all boats When planning becomes mere place making for elites urban and regional planners need to return to the fundamentals of their profession Although they

have not always done so planners are well positioned to advocate for greater equity in public policies that address the multiple objectives of urban planning including housing transportation economic development and the removal of noxious land uses in neighborhoods Thanks to generous funding from Cleveland State University the ebook editions of this book are available as Open Access volumes from Cornell Open cornellpress.cornell.edu/cornell-open and other repositories **High Cost of Free Parking** Donald Shoup,2021-02-25 Off street parking requirements are devastating American cities So says the author in this no holds barred treatise on the way parking should be Free parking the author argues has contributed to auto dependence rapid urban sprawl extravagant energy use and a host of other problems Planners mandate free parking to alleviate congestion but end up distorting transportation choices debasing urban design damaging the economy and degrading the environment Ubiquitous free parking helps explain why our cities sprawl on a scale fit more for cars than for people and why American motor vehicles now consume one eighth of the world s total oil production But it doesn t have to be this way The author proposes new ways for cities to regulate parking namely charge fair market prices for curb parking use the resulting revenue to pay for services in the neighborhoods that generate it and remove zoning requirements for off street parking **Breaking the Boundaries** B. Sanyal,2013-03-09 Exploring the complex arena of international planning for development has until now been uniquely the privilege of influential senior western planners This book calls into question many of their hallowed principles and much of the conventional wisdom still evident in the halls of academe At a time of increasing enrollment of foreign students in North American planning programs the emergence of a new voice has coincided with a growing skepticism worldwide about old notions of planning and development in poorer and ex colonial countries Now there is a need for brave innovations to reshape our understanding of the global crisis and the potential for progressive and democratic local solutions in both rich and poor nations alike This new voice is given expression by academics and professionals from Third World nations who received their planning education in the west and who now hold posts in major western planning schools **Breaking the Boundaries** presents their views and those of concerned colleagues about the need for a radically changed curriculum based on a comparative one world approach to planning education Their personal experiences as young expatriate scholars and later as teachers of both Third World and First World students in western planning schools are seen as crucial to this need for change Through candid reflections and perceptive critiques of their own field the spatial environmental social design and communications disciplines the contributors explore crucial issues in development planning from theoretical and professional practice perspectives **Self-Organization and Autonomic Informatics (I)** H. Czap,R. Unland,C. The High Cost of Free Parking Donald Shoup, 2017-10-20. One of the American Planning Association's most popular and influential books is finally in paperback with a new preface from the author on how thinking about parking has changed since this book was first published. In this no-holds-barred treatise, Donald Shoup argues that free parking has contributed to auto dependence, rapid urban sprawl, extravagant energy use, and a host of other problems. Planners mandate free parking to alleviate congestion but end up distorting transportation choices, debasing urban design, damaging the economy, and degrading the environment. Ubiquitous free parking helps explain why our cities sprawl on a scale fit more for cars than for people and why American motor vehicles now consume one eighth of the world's total oil production. But it doesn't have to be this way. Shoup proposes new ways for cities to regulate parking: namely, charge fair market prices for curb parking, use the resulting revenue to pay for services in the neighborhoods that generate it, and remove zoning requirements for off-street parking. Such measures, according to the Yale-trained economist and UCLA planning professor, will make parking easier and driving less necessary. Join the swelling ranks of Shoupistas by picking up this book today. You'll never look at a parking spot the same way again.

Forecasting Travel in Urban America Konstantinos Chatzis, 2023-07-11. A history of urban travel demand modeling (UTDM) and its enormous influence on American life from the 1920s to the present. For better and worse, the automobile has been an integral part of the American way of life for decades. Its ascendance would have been far less spectacular, however, had engineers and planners not devised urban travel demand modeling (UTDM). This book tells the story of this irreplaceable engineering tool that has helped cities accommodate continuous rise in traffic from the 1950s on. Beginning with UTDM's origins as a method to help plan new infrastructure, Konstantinos Chatzis follows its trajectory through new generations of models that helped make optimal use of existing capacity and examines related policy instruments, including the recent use of intelligent transportation systems. Chatzis investigates these models as evolving entities involving humans and nonhumans that were shaped through a specific production process. In surveying the various generations of UTDM, he delves into various means of production, from tabulating machines to software packages and travel survey methods, from personal interviews to GPS tracking devices and smartphones used to obtain critical information. He also looks at the individuals who have collectively built a distinct UTDM social world by displaying specialized knowledge, developing specific skills, and performing various tasks and functions, and by communicating, interacting, and even competing with one another. Original and refreshingly accessible, *Forecasting Travel in Urban America* offers the first detailed history behind the thinkers and processes that impact the lives of millions of city dwellers every day.
