Workshop Statistics Allan J. Rossman, Beth L. Chance, 2011-10-25 Allan Rossman's 4th Edition of *Workshop Statistics* Discovery with Data is enhanced from previous issues with more focus and emphasis on collaborative learning. It further requires student observation and integrates technology for gathering, recording, and synthesizing data. The text offers more flexibility in selecting technology tools for classrooms, primarily using technologies other than graphing calculators or Fathom Dynamic Data software. Furthermore, it presents more standards for teaching statistics in an innovative, investigative, and accessible way, as well as provides in-depth guidance and resources to support active learning of statistics and includes updated real data sets with everyday applications in order to promote statistical literacy.

The Learning and Teaching of Statistics and Probability Luis Saldanha, Neil J. Hatfield, Egan J. Chernoff, Caterina Primi, 2023-12-01 Filled with practical learning activities to adopt within your classroom, *The Learning and Teaching of Statistics and Probability* places reasoning about quantities and quantification at the core of learning and teaching statistics. A companion website to this book is also available at https://neilhatfield.github.io/IMPACT_Statistics, allowing readers to access a directory of resources, data collections, and web-based applets used in some of the instructional activities featured within this book. For example, Individual cases and their attributes, Data collections, sub-collections, and relevant operations to quantify their attributes, Samples, population, and quantifying variation, Types of processes, meanings of randomness, and probability as a measure of stochastic tendency, Sampling distributions, and statistical inference. Teaching Statistics Using Baseball Jim Albert, 2022-02-04 *Teaching Statistics Using Baseball* is a collection of case studies and exercises applying statistical and probabilistic thinking to the game of baseball. Baseball is the most statistical of all sports since players are identified and evaluated by their corresponding hitting and pitching statistics. There is an active effort by people in the baseball community to learn more about baseball performance and strategy by the use of statistics. This book illustrates basic methods of data analysis and probability models by means of baseball statistics collected on players and teams. Students often have difficulty learning statistics ideas since they are explained using examples that are foreign to the students. The idea of the book is to describe statistical thinking in a context that is baseball, that will be familiar and interesting to students. The book is organized using a same structure as most introductory statistics texts. There are chapters on the analysis of a single batch of data followed with chapters on comparing batches of data and relationships. There are chapters on probability models and on statistical inference. The book can be used as the framework for a one-semester introductory statistics class focused on baseball or

sports This type of class has been taught at Bowling Green State University It may be very suitable for a statistics class for students with sports related majors such as sports management or sports medicine Alternately the book can be used as a resource for instructors who wish to infuse their present course in probability or statistics with applications from baseball The second edition of Teaching Statistics follows the same structure as the first edition where the case studies and exercises have been replaced by modern players and teams and the new types of baseball data from the PitchFX system and fangraphs.com are incorporated into the text
