Pre Lab Work:

Before beginning this laboratory, answer the following questions on your own piece of paper in your notebook:

- Define the following terms:
 - growth rate – describes how fast a population is increasing or decreasing and is dependent upon the birth rate and death rate
 - birthrate – is the number of infants born in a given year/1000 people in the population
 - death rate – is the number of people who die in a given year/1000 individuals in the population
 - zero population growth – when the population is in equilibrium or the number of births and deaths are equal
 - developed country – countries that highly developed economy and advanced technology
 - developing country – countries that are considered to have low standard of living, and undeveloped industrially
 - demographic transition – refers to the transition from high birth and death rates to low birth and death rates
- What is a population explosion? How quickly is our population growing each year? What about each day?
A population explosion is when a population lacks limited resources so is able to grow out of control. The human population is grows about 80 million a year and 219, 178 each day.
- How is the growth rate of the human population calculated?
 $\text{Growth rate} = \text{birth rate} - \text{death rate}$
- What causes a negative population growth? What causes a positive population growth?
Negative population growth occurs when the birth rate is less than the death rate
Positive population growth occurs when the birth rate exceeds the death rate
- Why do the two graphs appear to have a different shape?
The population growth rate was much slower in the earlier years. The J-curve shows exponential population growth and the graphs are not drawn to the same scale.
- Using a piece of paper, create the following charts:

Country	Birthrate (%)	Death rate (%)	Population Growth 2005	Population Growth 2050	Demographic Transition	Relative Place in Transition	Sketch graph showing Blue & Pink Line
USA	2.06	0.51	0.92	-0.06	1.55	5

Global Science John W. Christensen, 2000 Asia's Energy Revolution Joseph Jacobelli, 2021-06-21 Asia is home to 60 per cent of the world's population including the world's two most populous nations China and India. The region's economic gains and rising middle class are accelerating demand for more consumer goods and a better quality of life. For further economic growth to be realised the region will need a massive supply of additional energy three to five fold 2020's amount by 2050. These changes create new business and investment opportunities for domestic companies and overseas participants. Asia's energy market already the world's biggest will soon be the most advanced. There will be mass adoption of digital technologies like artificial intelligence to make the distribution of solar wind and other clean resources smarter and more efficient. Led by China billions of dollars in capital investment will drive the region's shift to green sustainable energy replacing polluting and expensive fossil fuels which will help to rein in climate change. In Asia's Energy Revolution leading energy markets analyst and practitioner Joseph Jacobelli explains why Asia is the world's most important territory for energy transition how developments in the region will drive change in the rest of the world as well as how it will all be financed. The book discussion includes Analysis of past events and forward looking analysis of the industry in the region encompassing commercial economic and financial aspects Appraisal of new energy technologies such as electric vehicles and digital solutions such as blockchain for energy Review of the capital flows and sustainable financing channels needed to fund energy infrastructure and tech growth *Industrial Arene Chemistry* Jacques Mortier, 2023-03-17 *Industrial Arene Chemistry* Explore the wide array of uses for aromatic hydrocarbons in this comprehensive reference. Aromatics are a class of compounds normally but not exclusively organic which tend to be produced as by products of various industrial processes. Their importance as petrochemical materials in themselves along with the range of inter relations between different aromatic chemicals creates a complex and opportunity filled market for aromatics. *Industrial Arene Chemistry* provides a thorough look at the conventional techniques required to use and produce these aromatic hydrocarbons. Beginning with an overview of the global aromatic market including but not limited to manufacturers markets of BTX and downstream functional aromatics aromatics derived from renewable sources and economic forecasts the book will also explore the impact shifting environmental factors will have on the future of aromatic chemistry. The text further explores BTX production processes differentiated according to the raw materials used. Importantly this will establish the importance and growth of the biobased chemical industry. *Industrial Arene Chemistry* readers will also find Case studies that describe major elements of specific technologies prototyped by contributors companies as part of ongoing market development efforts. Process chapters that include summaries of the conventional techniques and a more detailed discussion of recent high impact studies. Recent advances in conventional aromatic reactions including alkylation acylation and carboxylation hydrogenation reduction oxidation nitration amination sulfonation and halogenation. *Industrial Arene Chemistry* is a useful reference for chemists and
