World Resources Institute Report 1996:

The World's Water 1998-1999, The quality and availability of fresh water is of critical importance to human and ecosystem health. The World's Water 1998-1999 is a comprehensive reference on worldwide freshwater resources and the political, economic, scientific, and technological issues associated with them. It provides both detailed analysis of the most significant trends and events and the most up-to-date data available on water resources and their use. Chapters examine access to basic water requirements for drinking and sanitation, hydropower and dam construction, water law, water and conflict, water and global climate change, international water institutions and activities. The book features more than fifty charts, tables, and maps that present the most current data on a range of factors including the availability and use of water, numbers of threatened and endangered aquatic species, dam and desalination capacity, worldwide trends in several devastating water-borne diseases, changes by region in global precipitation patterns since 1900, and much more. To be published on a biennial basis, *The World's Water* will be an essential reference for water resources specialists with both government agencies and nongovernmental organizations, resource economists, planners, public policy and public administration experts, environmental lawyers, students, and anyone concerned with water issues. **World Resources**

2000-2001 C. Rosen, 2000-11-29 *World Resources 2000-2001: People and Ecosystems: The Fraying Web of Life* focuses on the critical link between ecosystems and people and provides an overview of current global environmental and economic trends using hundreds of indicators in more than 150 countries. Until now, there has not been a comprehensive formalised process to assess human damage to our ecosystems, to establish a baseline for future actions, or to disseminate information that would aid the formulation of better policies world-wide. This book is the first reliable, comprehensive base of evidence for taking stock and taking care of the world's diverse ecosystems. It deals with the critical issues that focus on the link between ecosystems and people, highlights the goods and services that ecosystems provide, and illustrates the benefits of a better understanding and better management of the planet's natural wealth. Reports on pilot studies by leading scientists and international institutions assessing the state of the world's ecosystems: forests, croplands, grasslands, freshwater systems, and coastal areas. Increases the understanding of human dependence on nature, raises awareness of environmental threats, provides examples of wise stewardship from all corners of the globe, focuses on four main issues: population and human well-being, food and water security, consumption, energy, and wastes, trace emissions since the Kyoto protocol, gives data tables for more than 150 countries. It demonstrates the power of information and new digital technologies to transform the way we interact with our environment and is particularly important for environmentalists, scientists, professionals, journalists, policy makers, and students. This special Millennium Edition of the World Resources Institute's biennial report published by Elsevier Science in September 2000 in partnership with the World Resources Institute, the UN Environment Program, the UN Development Programme, and the World Bank.
