

STATISTICAL PROCEDURES EMPLOYED IN THE JOURNAL OF AGRICULTURAL EDUCATION

Hannie E. Bowen, Professor
Timothy J. Rollins, Assistant Professor
Connie D. Baggott
Jeffrey P. Miller

University faculty, including agricultural educators, must increasingly demonstrate their scholarship through papers presented at research conferences and articles published in refereed journals. In documenting the emphasis being placed upon research and related scholarly activities, Warnthrod (1987, p. 2) asked in his Central Region Agricultural Education Research Conference keynote address:

What agricultural education researcher -- whether graduate student, beginning assistant professor or tenured professor -- would dare submit a research article or paper to The Journal of Ag. AEA, to this research conference, or to the National Agricultural Education Research Meeting that ignored technical considerations such as internal and external validity, validity and reliability of instruments, nonresponse and the assumptions and appropriateness of statistical analysis procedures?

To help meet these challenges, Warnthrod (1987) indicated that graduate programs which prepare future agricultural education faculty are devoting more attention to research methodology, data analysis, and the reporting of research. In addition, during the 1980s Ohio State University faculty conducted precessions before the National Agricultural Education Research Meeting (NAERM) and the National Symposium on Research in Extension Education on topics such as designing, conducting, and analyzing research.

Other indicators document the emphasis being placed on the dissemination of new knowledge. The Proceedings of the 1989 NAERM constituted volume 16 for this conference. Each region of the American Association of Teacher Educators in Agriculture (AATEA) conducts an annual refereed research conference. In 1989, the 4th Biennial National Symposium on Research in Extension Education was conducted. The Association for International Agricultural and Extension Education held its 5th annual research conference in 1989. Between 1960 and 1988, the Journal of the AATEA was an outlet for disseminating agricultural education research before it was renamed the Journal of Agricultural Education.

As the number of outlets for disseminating agricultural education research started to increase, a few scholars began to examine quality dimensions of the research. During his address at the 1988 NAERM, Crankilton concluded that a considerable amount of the research is conducted by graduate students. Mannsbach, McKenna, and Pfau (1984) reached a similar conclusion after analyzing abstracts reported in the 1974-82 Summaries of Research and Development Activities in Agricultural Education. In addition, they found that almost 90% of the research was classified as descriptive. From an analysis perspective, they found that, "About one-third of the studies submitted for inclusion in the Summaries reported the statistical test or technique used" (Mannsbach, McKenna, & Pfau, 1984, p. 14).

When researchers perform critical analyses of outlets used to disseminate educational research, most focus on one aspect of the research process. For example, Shaver and Norton (1980) studied replication and randomness as related to the American Educational Research Journal. Several researchers have identified statistical procedures used in reporting educational research (Goodwin & Goodwin, 1985a, 1985b; Elmore & Woehlke, 1988a, 1988b; Willson, 1990).

Other researchers have classified statistical procedures used in educational research as basic, intermediate, or advanced. Goodwin and Goodwin (1985b) found that almost one-third of the procedures used in the American Educational Research Journal (AERJ) and the Journal of Educational Psychology (JEP) were classified as basic. Kelly, Spores, Camp, Hauser, and Kopf (1989) found that slightly over 60% of the statistical procedures reported in the Journal of Vocational and Technical Education (JVTE), a philosophical and theoretical-based journal, were classified as basic level. Goodwin and Goodwin (1985b) found that almost 45% of procedures used in the JEP and 37% in the AERJ were classified as intermediate. Kelly et al. found that even though less than 10% of the statistical procedures in the JVTE were classified as intermediate, INT,
