Pharmaceutical Drug Product Development and Process Optimization Sarwar Beg,Majed Al Robaian,Mahfoozur Rahman,Syed Sarim Imam,Nabil Alruwaili,Sunil Kumar Panda,2020-05-01 Pharmaceutical manufacturers are constantly facing quality crises of drug products leading to an escalating number of

product recalls and rejects Due to the involvement of multiple factors the goal of achieving consistent product quality is always a great challenge for pharmaceutical scientists This volume addresses this challenge by using the Quality by Design QbD concept which was instituted to focus on the systematic development of drug products with predefined objectives to provide enhanced product and process understanding This volume presents and discusses the vital precepts underlying the efficient effective and cost effective development of pharmaceutical drug products It focuses on the adoption of systematic quality principles of pharmaceutical development which is imperative in achieving continuous improvement in end product quality and also leads to reducing cost time and effort while meeting regulatory requirements The volume covers the important new advances in the development of solid oral dosage forms modified release oral dosage forms parenteral dosage forms semisolid dosage forms transdermal drug delivery systems inhalational dosage forms ocular drug delivery systems nanopharmaceutical products and nanoparticles for oral delivery

Multiple Scales of Suspended Sediment Dynamics in a Complex Geometry Estuary Fernanda Achete, 2020-04-22 Many estuaries are located in urbanized highly engineered environments Cohesive sediment plays an important role due to its link with estuarine health and ecology An important ecological parameter is the suspended sediment concentration SSC translated into turbidity levels and sediment budget This study contributes to investigate and forecast turbidity levels and sediment budget variability at San Francisco Bay Delta system at a variety of spatial and temporal scales applying a flexible mesh process based model Delft3D FM It is possible to have a robust sediment model which reproduces 90% of the yearly data derived sediment budget with simple model settings like applying one mud fraction and a simple bottom sediment distribution This finding opens the horizon for modeling less monitored estuaries Comparing two case studies i e the Sacramento San Joaquin Delta and Alviso Slough a classification for estuaries regarding the main sediment dynamic forcing is proposed event driven estuary Delta and tide driven estuary Alviso Slough In the event driven estuaries the rivers are the main sediment source and the tides have minor impact in the net sediment transport In the tide driven estuaries the main sediment source is the bottom sediment and the tide asymmetry defines the net sediment transport This research also makes advances in connecting different scientific fields and developing a managerial tool to support decision making It provides the basis to a chain of models which goes from the hydrodynamics to suspended sediment to phytoplankton to fish clams and marshes
