Six Weeks Period: 5		Grade Level & Course: 11 th and Physics	
Timeline: 15 Days		Unit Title: Current Electricity	Lesson # 1
Stated Objectives: TEK # and SE	P.5 The student knows the nature of forces in the physical world. The student is expected to:		
	P.5E Characterize materials as conductors or insulators based on their electrical properties. P.5F Design, construct, and calculate in terms of current through, potential difference across, resistance of, and power used by electric circuit elements connect in both series and parallel combinations.		
See Instructional Focus Document (IFD) for TEK Specificity			
Key Understandings	Electric current is the flow of electrons.		
	By convention, electric current is the direction in which a positive test charge moves.		
	An electrical circuit transforms electrical energy into thermal or mechanical energy.		
	Resistors can be combined in different ways to make a series or parallel circuit.		
	In a series circuit, the charge travels along one path.		
	In a parallel circuit, the charge is divided into two or more paths. Most circuits are a combination of parallel circuits.		
	It is important to understand the consequences, causes, and prevention of electrical overloads and high voltage shock to persons and equipment.		
Misconceptions	Students confuse voltage and current with the electric charges that are moving.		
	Students may think current flows around a complete circuit and is used by objects like light bulbs, so less current returns than leaves the source of the electricity.		
	Changing the order of resistors in a series circuit does not affect the behavior of the circuit.		
	Students may think that current flows from a battery to a light bulb, but not from the light bulb to the battery.		
Key Vocabulary	Ohm's Law Conductor Resistor Circuit Potential difference Ammeter Voltmeter Direct current	alternating current capacitor power short ground battery resistance electric force	voltage current multimeter series circuit parallel circuit bulb LED
