Twin Perspectives LLM and Generative AI in Modeling and Engineering Smart Life and Structuring Security for Responsible Digital Systems *Adopting Information Systems Perspectives from Small Organizations* Özgün Imre, 2017-12-08 Why do organizations adopt information systems Is it just because of financial reasons of concerns for efficiency Or is it due to external pressures such as competitor pressure that an organization adopts an information system And how does the adoption take place Is it a linear process or is the process one of conflicts Does a specific person govern this process or do we have multiple parties involved What happens if these conflicts occur among those involved How does the organization move on and achieve a successful information system adoption By investigating two organizations one international academic journal and one South American manufacturing company this thesis aims to investigate the whys and hows of information system adoption and aims to contribute to the discourse on information system adoptions in small organizations an often underrepresented segment in information system adoption literature By adopting different theoretical lenses throughout the five research papers included this body of work suggests that even when seemingly simple information system adoptions can become rather complex The cases reveal that the role of information systems and issues related to information system adoptions are often not well thought out in the early days of the organization The actors understandings of adoption and consequences mature and the information systems become more intertwined Common use of stakeholder theory introduces general stakeholders and their interaction with the focal organization The cases reveal that the adoption process involves multiple actors even within what would initially appear as a stakeholder and that those actors can be in conflict with each other These conflicts often lead to negotiations and the cases reveal that these negotiations are opportunities of learning the actors engage with the information system and with each other gaining new knowledge about the issues at hand The dissertation argues that there are various social worlds in information system adoptions and various factors ranging from organizational structure to social norms that often affect why and how the organization undergoes an adoption process The multiple power relations and divergent interests of stakeholders in these adoption processes and how information systems affect other parts of the organization reinforce the need for a well thought out flexible and reflexive approach to information system adoptions Enterprise and Organizational Modeling and Simulation Robert Pergl, Eduard Babkin, Russell Lock, Pavel Malyzhenkov, Vojtěch Merunka, 2019-11-13 This book constitutes the refereed proceedings of the 15th International Workshop on Enterprise and Organizational Modeling and Simulation EOMAS 2019 held in Rome Italy in June 2019 The main focus of EOMAS is on the role importance and application of modeling and simulation within the extended organizational and enterprise context The 12 full papers presented in this volume were carefully reviewed and selected from 25 submissions They were organized in topical sections on conceptual modeling enterprise engineering and formal methods *Information Security and Optimization* Rohit Tanwar, Tanupriya Choudhury, Mazdak Zamani, Sunil Gupta, 2020-11-18 Information Security and Optimization maintains a practical perspective while offering theoretical explanations The book explores concepts that

are essential for academics as well as organizations It discusses aspects of techniques and tools definitions usage and analysis that are invaluable for scholars ranging from those just beginning in the field to established experts What are the policy standards What are vulnerabilities and how can one patch them How can data be transmitted securely How can data in the cloud or cryptocurrency in the blockchain be secured How can algorithms be optimized These are some of the possible queries that are answered here effectively using examples from real life and case studies Features A wide range of case studies and examples derived from real life scenarios that map theoretical explanations with real incidents Descriptions of security tools related to digital forensics with their unique features and the working steps for acquiring hands on experience Novel contributions in designing organization security policies and lightweight cryptography Presentation of real world use of blockchain technology and biometrics in cryptocurrency and personalized authentication systems Discussion and analysis of security in the cloud that is important because of extensive use of cloud services to meet organizational and research demands such as data storage and computing requirements Information Security and Optimization is equally helpful for undergraduate and postgraduate students as well as for researchers working in the domain It can be recommended as a reference or textbook for courses related to cybersecurity
