Systematic Transformation Method from UML to Event-B Zou Sheng-Rong, Geng Xue, Yao Ju-Yi, Liu Xiao-Ying, Zhi Yu-Hua, 2024-06-05 Since the emergence of software engineering in the late 1960s requirements analysis has always been an important theme of software development In the process of software development many people are needed to cooperate to ensure the stability and reliability of the software According to the degree of formalization in the software development process software engineering methods can be divided into three types non formal semi formal and formal In object oriented software development UML has become a de facto modeling standard However although UML is intuitive and easy to understand and apply it has inaccurate semantics and UML is a semi formal modeling language that cannot be formally verified Event B is a formal method based on a large number of mathematical predicate logic which is accurate but difficult to understand and apply Therefore how to combine the advantages of UML diagrams and Event B methods is the focus of research
