Neoliberal University Joyce E. Canaan, Wesley Shumar, 2008-05-01 This volume considers how current transitions in postsecondary education are impacting Higher Education HE institutions and subjects in a number of Northern nations as well as how these transitions are indicative of the wider shift from the welfare to the market state The university is now considered a key site for training and wealth generation in the so called knowledge economy that operates in a globalising high tech world Further these transitions are underpinned by neo liberal economic ideas that assume that the public sector is a drag on the economy unless it is subject to the rules regulations and assumptions that govern the private sector This excellent volume an important contribution to Education as well as Economics and Politics furthers our understandings of universities as marketable entities as part of the globalized economy Teaching and Learning Through Inquiry Virginia S. Lee, 2023-07-03 Inquiry guided learning IGL refers to an array of classroom practices that promote student learning through guided and increasingly independent investigation of complex questions and problems Rather than teaching the results of others investigations which students learn passively instructors assist students in mastering and learning through the process of active investigation itself IGL develops critical thinking independent inquiry students responsibility for their own learning and intellectual growth and maturity The 1999 Boyer Commission Report emphasized the importance of establishing a firm grounding in inquiry based learning and communication of information and ideas While this approach capitalizes on one of the key strengths of research universities the expertise of its faculty in research it is one that can be fruitfully adopted throughout higher education North Carolina State University is at the forefront of the development and implementation of IGL both at the course level and as part of a successful faculty led process of reform of undergraduate education in a complex research institution This book documents and explores NCSU's IGL initiative from a variety of perspectives how faculty arrived at their current understanding of inquiry guided learning and how they have interpreted it at various levels the individual course the major the college the university wide program and the undergraduate curriculum as a whole The

contributors show how IGL has been dovetailed with other complementary efforts and programs and how they have assessed its impact. The book is divided into four parts: the first briefly summarizes the history of the initiative; Part Two, the largest section, describes how various instructors, departments, and colleges in a range of disciplines have interpreted inquiry-guided learning. It provides examples from disciplines as varied as ecology, engineering, foreign language, learning, history, music, microbiology, physics, and psychology. It also outlines the potential for even broader dissemination of inquiry-guided learning in the undergraduate curriculum as a whole. Part Three describes two inquiry-guided learning programs for first-year students and the interesting ways in which NCSU's university-wide writing and speaking program and growing service-learning program support inquiry-guided learning. Part Four documents how the institution has supported instructors and how they have supported themselves, as well as the methods used to assess the impact of inquiry-guided learning on students, faculty, and the institution as a whole. The book has been written with three audiences in mind: instructors who want to use inquiry-guided learning in their classrooms; faculty developers considering supporting comparable efforts on their campuses; and administrators interested in managing similar undergraduate reform efforts. It will also appeal to instructors of courses in the administration of higher education who are looking for relevant case studies of reform. While this is a model successfully implemented at a research university, it is one that is relevant for all institutions of higher education. Solar Energy Update, 1983
