Justification of the NATO Advanced Research Workshop on Collaborative Dialogue Technologies in Distance Learning
Computer Mediated Communication CMC systems have features that reduce some temporal physical and social constraints
on communication Theories of communication have shifted from viewing communication as a linear transmission of messages
by a sender to a receiver to viewing it as a social paradigm where individuals are actors in a network of interdependent
relationships embedded in organizational and social structures Recent research focuses on models of information sharing to
support not only the activities of individuals but also the problem solving activities of groups such as decision making
planning or co writing This area of research is called Computer Supported Cooperative Work CSCW The Artificial
Intelligence AI approach uses knowledge based systems to enhance and facilitate all these processes including the possibility
of using natural language The traditional model of distance education places a strong emphasis on independent study
supported by well developed learning materials This model can be characterized as one way media However the potential of
CMC to provide better guidance to the student in Higher Distance Education has been quickly recognized for at least two
