Practice Questions – Answers on the website

What are three factors that affect rate of dissolution?

Solute size – decreasing the size of the individual particles or grains of solute can increase surface area. Increased surface area exposes more solute to the solvent, speeding up the dissolution.

Temperature – increased temperature speeds up the molecules of the solvent, allowing more solvent to come into contact with the solute.

Stirring or mixing – mechanically mixing the solvent and solute allows more solvent to come into contact with the solute.

What is created when an acid is combined with a base?

An acid and a base can be combined in what is known as a neutralization reaction. In this reaction, the pH will become something between the pH's of the acid and the base. When they are combined, the products are water (from the H^+ and OH^- ions) and an ionic compound known as a salt.

Name 3 characteristics that acids and bases share.

Acids and bases can both be

corrosive

poisonous

electrolytes (can conduct electricity)

Both can also be described as having unique tastes and capable of changing the color of indicators.
