without criticism from trade industry producers of beef potatoes and restaurant chains like McDonald s The Wall Street Journal reported in 2006 that various organizations were trying to create campaigns against Schlosser s allegations in the book that fast food consumption contributes to obesity and fostered corruption in the nation s agricultural system EXCERPT FROM THE BOOK The author playfully muses that should America be attacked in the future Cheyenne Mountain may be the only place with artifacts of our civilization Burger King wrappers hardened crusts of Cheesy Bread Barbeque Wings bones and the red white and blue of a Domino s pizza box What started as a small food stand in southern California has now spread all over the nation Schlosser says fast food has infiltrated every nook and cranny of American society Shockingly Americans spend more today on fast food than higher education computers or new cars Schlosser estimates On any given day in the United States about one quarter of the country s adult population visits a fast food restaurant The author argues that the powerful rise of fast food industry happened quickly and not only transformed the American diet but also out landscape economy workforce and popular culture Importantly Schlosser draws parallels between Cheyenne Mountain and today s fast food industry

What the World Eats Faith D'Aluisio, 2008-08-01

Sitting down to a daily family meal has long been a tradition for billions of people. But in every corner of the world, this age-old custom is rapidly changing. From increased trade between countries to the expansion of global food corporations like Kraft and Nestl, current events are having a tremendous impact on our eating habits. Chances are your supermarket is stocking a variety of international foods, and American fast-food chains like McDonald's and Kentucky Fried Chicken are popping up all over the planet. For the first time in history, more people are overfed than underfed. And while some people still have barely enough to eat, others overeat to the point of illness. To find out how mealtime is changing in real homes, authors Peter Menzel and Faith D'Aluisio visited families around the world to observe and photograph what they eat during the course of one week. They joined parents while they shopped at mega-grocery stores and outdoor markets and participated in a feast where a single goat was shared among many families. They watched moms making dinner in kitchens and over cooking fires, and they sat down to eat with twenty-five families in twenty-one countries. If you're keeping track, that's about 525 meals. The foods dished up ranged from hunted seal and spit-roasted guinea pig to U.N. rationed grains and gallons of Coca-Cola. As Peter and Faith ate and talked with families, they learned

firsthand about food consumption around the world and its corresponding causes and effects The resulting family portraits offer a fascinating glimpse into the cultural similarities and differences served on dinner plates around the globe This book has been selected as a Common Core State Standards Text Exemplar Grades 2-3 Read Aloud Informational Texts in Appendix B

Thinking in Circles About Obesity Tarek K. A. Hamid,2009-09-22 Today s children may well become the first generation of Americans whose life expectancy will be shorter than that of their parents The culprit public health experts agree is obesity and its associated health problems Heretofore the strategy to slow obesity s galloping pace has been driven by what the philosopher Karl Popper calls the bucket theory of the mind When minds are seen as containers and public understanding is viewed as being a function of how many scientific facts are known the focus is naturally on how many scientific facts public minds contain But the strategy has not worked Despite all the diet books the wide availability of reduced calorie and reduced fat foods and the broad publicity about the obesity problem America s

waistline continues to expand It will take more than food pyramid images or a new nutritional guideline to stem obesity s escalation Albert Einstein once observed that the significant problems we face cannot be solved at the same level of thinking we were at when we created them and that we would have to shift to a new level a deeper level of thinking to solve them This book argues for and presents a different perspective for thinking about and addressing the obesity problem a systems thinking perspective While already commonplace in engineering and in business the use of systems thinking in personal health is less widely adopted Yet this is precisely the setting where complexities are most problematic and where the stakes are highest
